# Lazard Global Quality Growth Fund

#### **Investment Review**

In the six-month period to 30 September 2022, the Lazard Global Quality Growth Fund returned -21.6% in US dollar terms, against the MSCI World Index which returned -21.3%<sup>1</sup>.

#### **Market Review**

In the trailing six-month period that ended 30 September, world equity markets fell as risk appetites ebbed on concerns that a global economic slowdown was growing more likely amid a number of interest rate increases.

Markets were under pressure for most of the period as stubbornly high inflation forced central banks to abandon their ultra-low interest rate policies in favour of monetary tightening. At the forefront of these efforts was the US Federal Reserve (Fed), which pursued a rate-hiking campaign starting in March that would ultimately result in four increases to its short-term interest rate during the April-September period. At first, markets reacted positively to the Fed's more hawkish stance, but stocks soon came under pressure as it became clear that the US central bank was determined to rein in inflation, even if it meant tipping the US economy into a recession.

The Fed's actions were part of a larger wave of central bank monetary tightening across much of the world during the period. In Europe, the European Central Bank raised its benchmark rate twice while in the UK, the Bank of England (BoE) did so four times. Notably, the BoE, which, in December 2021, became the first major central bank to begin raising interest rates, pivoted away from its monetary tightening policy stance in September when it announced that it would initiate large-scale purchases of UK government bonds to mitigate reaction to the new British government's expansionary fiscal plans. Meanwhile, in Asia, the Bank of Japan remained an outlier among key central banks by maintaining its loose monetary policy despite some signs that Japan's low-inflation environment was changing.

The conclusion of the second-quarter earnings season highlighted corporate resilience in the face of a challenging macro environment. In the US, 75% of the companies in the S&P 500 Index that reported results topped consensus estimates, which was above the long-term average. Across the Atlantic, 57% of the companies in the pan-European STOXX 600 Index that reported results posted better-than-expected earnings. In Japan, 68% of the companies in the Topix Index reported positive earnings surprises.

### **Portfolio Review**

#### What Contributed to Returns:

- Stock selection in consumer discretionary contributed to performance, as shares of US discount retailer Dollar General and Canadian discount retailer Dollarama rose during the period.
- Stock selection in industrials contributed to performance, as shares of Booz Allen Hamilton, a leading provider of high-end management and technology consulting services, rose during the period.
- Stock selection in information technology contributed to performance, as shares of Amphenol, one of the world's largest providers of interconnect, sensor, and antenna solutions, outperformed during the period.

#### What Detracted from Returns:

- Stock selection in health care detracted from performance, as shares of Align Technology, maker of Invisalign, declined during the period.
- A lack of exposure to the energy sector detracted from performance.
- Stock selection in financials detracted from performance, as shares of Intercontinental Exchange, a financial data provider and exchange operator, declined during the period.

### Outlook

Markets continue to digest several negative factors facing the global economy, specifically the prospects of a global recession, the ability of central banks to tame inflation, the impacts from Russia's invasion of Ukraine, and COVID-related lockdowns in China. We expect these factors to lead to continued volatility in markets. However, our emphasis remains on owning what we believe to be some of the highest-quality companies in the world. We believe market participants are placing undue focus on short-term earnings estimate cuts, while often overlooking longer-term earnings potential. We think this dynamic should continue to provide us with opportunities to build out or start new positions in high-quality companies whose long-term potential is underappreciated.

### Lazard Asset Management Limited

30 September 2022

# Lazard Thematic Inflation Opportunities Fund\*

#### **Investment Review**

Since inception through to 30 September 2022, the Lazard Thematic Inflation Opportunities Fund (the "Fund") returned -6.5% in US Dollar terms against the MSCI AC World Index, which returned -6.8%<sup>1</sup>.

### **Market Review**

World equity markets fell sharply during the period, as risk appetite ebbed on fears that a global economic downturn was growing increasingly likely amid a series of interest rate hikes.

Central bank activity in response to stubbornly high global inflation was the dominant driver of stock market behaviour during the period, with the trajectory of the US Federal Reserve's rate-hiking campaign front and center in investors' minds.

The Fed's actions were part of a larger wave of central bank-engineered monetary tightening that swept across Europe and the developing world during the period. In the euro zone, where inflation reached a record high due to soaring food and energy prices, the European Central Bank raised its key interest rate by 50 basis points and 75 basis points in July and September, respectively, and promised more increases to come, including another 75 basis points hike likely in October. In the United Kingdom, the Bank of England (BoE) raised interest rates by 50 basis points in late September, even as it acknowledged that the country may already be in a recession.

The conclusion of the second-quarter earnings season highlighted the challenging market environment. In the United States, 75% of the companies in the S&P 500 Index that reported results topped consensus estimates, which was slightly below the five-year average of 77% but above the long-term average of 62%. Across the Atlantic, 57% of the companies in the pan-European STOXX 600 Index that reported results posted better-than-expected earnings, slightly above the six-year average. Year-on-year second-quarter earnings growth rate is expected to have increased 26%.

### **Portfolio Review**

All six themes declined in the third quarter of 2022 with five outperforming the market.

#### What Contributed to Returns:

- Construction materials Vulcan Materials rose on robust results and continued policy driven demand.
- Capital goods company Deere gained with the rise in agricultural prices and strong demand.

#### What Detracted from Returns:

- Gold miner Newmont declined on a weaker gold price and rising costs with weak production.
- Sysco fell on concerns over impact of macroeconomic factors on the food service industry.

### Outlook

Our observation of policy reactions to inflation reinforces the premise of our strategy, which is that the recent bout of inflation is a precursor to a more entrenched structural inflationary environment.

In our view, more extreme cyclicality is to be expected in a regime of high structural inflation—as in the 1970s, economies may lurch between surging inflation and recession, which is very much what we are seeing now. Our multi-theme approach, with each theme capturing different drivers of this inflationary period, means we have exposure to both defensiveness and cyclicality. At the stock level, we are seeking companies that have underappreciated optionality embedded within them. As we head into the final quarter of 2022, we may have seen the peak of inflation in the short-term, but we believe markets may be materially underestimating the persistence of inflation given the likely policies of central banks and governments.

# Lazard Global Convertibles Investment Grade Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Global Convertibles Investment Grade Fund (the "Fund") returned -11.2% (hedged in euro) against the Refinitiv Convertible Global Focus Investment Grade Index, which returned -9.4% (hedged to euro).<sup>1</sup>

### **Market Review**

In the trailing six-month period that ended 30 September, world equity markets fell sharply as the global economic outlook dimmed amid a series of interest rate hikes.

Markets were on the back foot for most of the period as stubbornly high inflation forced central banks to abandon their pandemic-era, ultra-low interest rate policies in favour of monetary tightening. At the forefront of these efforts was the US Federal Reserve (Fed), which pursued an aggressive rate-hiking campaign starting in March that included four increases to its short-term interest rate during the April-September period. Stocks came under pressure as it became clear that the US central bank, through its pronouncements and its actions, was determined to rein in soaring price growth, even if it meant tipping the US economy into a recession. In response, the yield on the benchmark 10-year US Treasury note increased 148 bps in the six-month period to 3.80%, which also dented the appeal of stocks.

The Fed's actions were part of a larger wave of central bank-engineered monetary tightening that swept across much of the world during the period. In Europe, where the protracted Russia-Ukraine conflict has led to soaring energy prices that has resulted in rampant inflation, the European Central Bank, raised its benchmark rate twice. Meanwhile, in Asia, the Bank of Japan (BoJ) remained an outlier among key central banks by maintaining its loose monetary policy despite some signs that Japan's low-inflation environment was changing. During the period, currency movements amongst the G-10 was high, with the US dollar showing considerable strength.

Despite stiffening headwinds, data suggested that company profits remained resilient during the first and second quarters. In the US, at least 75% of the companies in the S&P 500 Index that reported results topped consensus estimates, which was above the long-term average of 62%. Across the Atlantic, at least 57% of the companies in the pan-European STOXX 600 Index that reported results posted better-than-expected earnings, exceeding the 53% that do so in a typical quarter. In Japan, the number of companies that exceeded earnings expectations in the Topix Index increased with each succeeding quarter.

Against this backdrop, equity markets in both the developed and developing worlds fell sharply, with the former outperforming the latter. In the US and Europe, the S&P 500 Index and the STOXX 600 Index fell into bear-market territory at the end of the period. In Japan, the Topix Index fell, as the yen's outlook amid conflicting actions from Japanese policymakers; the BoJ maintained its ultraloose interest rate policy while the government intervened in the foreign exchange market in September. Meanwhile in emerging markets, China's stock market fell on bearish sentiment about the country's economic outlook amid ongoing coronavirus lockdowns, a beleaguered housing sector, and weakening demand for exports.

The pace of new issuance of convertibles was subdued during the period, with six-month issuance at \$18 billion (a decrease of 72% compared to the same period the year before).<sup>2</sup>

### **Portfolio Review**

#### What Contributed to Returns:

- An underweight to European real estate was additive as global interest rates continued to rise during the period.
- An underweight to Asia contributed positively as the region was impacted negatively by issues in China's property sector as well as the economic impact of the country's rolling COVID-19 shutdowns.
- An underweight to modified duration added to relative performance as interest rates in the US and Europe continued to rise following high inflation prints.

#### What Detracted from Returns:

- Overweight to US technology was a negative contributor, as high-growth names underperformed due to their interest rate sensitivity.
- Names linked to tourism; particularly online booking websites detracted on fears surrounding weakening global economic growth.
- Security selection in European materials detracted on fears of higher input costs and slower regional economic growth.

# Lazard Global Convertibles Investment Grade Fund (continued)

## Outlook

As major economies head closer toward an economic recession, we anticipate a shift in central bank policy that would allow for a clearer picture of the path for policy rates, an anchoring of backend rates, and potentially less macro-driven market volatility. This could prove to be a more supportive environment for equities, particularly for the more interest-rate sensitive growth and mid-cap names.

Despite the large correction in equity prices, the fundamentals of many convertible issuing companies have remained resilient. In an environment with less interest-rate volatility, we believe growth names, particularly in the US, could outperform due to the strong underperformance seen over the last 18 months and businesses that could prove less sensitive to the slowing global economy.

In addition, we believe some companies could positively surprise with their results against current low expectations as the persistence of supply-demand constraints could remain a tailwind to financial performance, allowing them to maintain pricing power, even in the face of slowing economic growth. In addition, we have seen an underperformance of many equities back toward the doldrums of COVID-19 levels despite revenues for many of these companies nearing or exceeding the 2019 levels.

In terms of bond structures, the correction we have seen this year in the asset class has moved many convertible bonds below par, increasing the overall yield. In fact, "growth" convertible bonds now offer attractive yields, with over 50% of the convertible bonds from the technology sector yielding more than 5% per annum. We can still find some equity exposure in these bonds, which will act as an added source of return should the equity start to rebound. This setup also means the convertibles on average are now relatively closer to their bond floor, which should allow for important defence to the downside, during periods of risk-off or higher volatility.

In conclusion, this has been a difficult year for almost all risk assets, including convertibles, as the macro environment—namely inflation and monetary policy—has negatively impacted performance and increased volatility. While it is too early to declare this period as over, there are signs that the coming quarters may bring a more balanced monetary policy response and with it a greater focus on corporate fundamentals. We believe that this could prove a supportive market for many of the underlying issuers in convertibles given compelling valuations, while many current convertible bond structures offer a unique opportunity to both interesting yield and equity sensitivity, in our view.

Meanwhile in emerging markets, China's stock market fell on bearish sentiment about the country's economic outlook amid ongoing coronavirus lockdowns, a beleaguered housing sector, and weakening demand for exports.

The pace of new issuance of convertibles was subdued during the period, with six-month issuance at \$18 billion (a decrease of 72% compared to the same period the year before).<sup>2</sup>

### **Portfolio Review**

#### What Contributed to Returns:

- Exposure to Chinese ADR with US listed convertible bonds was additive, as the Chinese government took a more supportive stance for the economy and signalled an end to the crackdown on technology firms.
- The proposed nationalisation by the French State of an electricity utility present in the portfolio activated specific clauses for the bond and contributed to elevated returns.
- The partial hedging of interest rate risk helped insulate the strategy from the impact of rising interest rates.

#### What Detracted from Returns:

- North American issuers, in particular the cruise operators, costed during the period as the deteriorating macro conditions and rising financing costs weighed on investor sentiment.
- Across regions, exposure to airlines costed. Operational and staffing issues during the period led to elevated cancellations and weighed on profitability, despite elevated demand and favourable ticket pricing.
- The portfolio equity sensitivity, averaging 45% during the period, costed in the context of declining equity markets across regions, particularly in the US.

# Lazard Global Convertibles Recovery Fund (continued)

### Outlook

As major economies head closer toward an economic recession, we anticipate a shift in central bank policy that would allow for a clearer picture of the path for policy rates, an anchoring of backend rates, and potentially less macro-driven market volatility. This could prove to be a more supportive environment for equities, particularly for the more interest-rate sensitive growth and mid-cap names.

Despite the large correction in equity prices, the fundamentals of many convertible issuing companies have remained resilient. In an environment with less interest-rate volatility, we believe growth names, particularly in the US, could outperform due to the strong underperformance seen over the last 18 months and businesses that could prove less sensitive to the slowing global economy.

In addition, we believe some recovery names could positively surprise with their results against current low expectations as the persistence of supply-demand constraints could remain a tailwind to financial performance, allowing them to maintain pricing power, even in the face of slowing economic growth. In addition, we have seen an underperformance of many recovery names' equities back toward the doldrums of COVID-19 levels despite revenues for many of these companies nearing or exceeding the 2019 levels.

In terms of bond structures, the correction we have seen this year in the asset class has moved many convertible bonds below par, increasing the overall yield. In fact, "growth" convertible bonds now offer attractive yields, with over 50% of the convertible bonds from the technology sector yielding more than 5% per annum. We can still find some equity exposure in these bonds, which will act as an added source of return should the equity start to rebound. This setup also means the convertibles on average are now relatively closer to their bond floor, which should allow for important defense to the downside, during periods of risk-off or higher volatility.

In conclusion, this has been a difficult year for almost all risk assets, including convertibles, as the macro environment—namely inflation and monetary policy—has negatively impacted performance and increased volatility. While it is too early to declare this period as over, there are signs that the coming quarters may bring a more balanced monetary policy response and with it a greater focus on corporate fundamentals. We believe that this could prove to be a supportive market for many of the underlying issuers in convertibles given compelling valuations, while many current convertible bond structures offer a unique opportunity to both interesting yield and equity sensitivity, in our view.

# Lazard Emerging Markets Bond Fund

### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Emerging Markets Bond Fund (the "Fund") returned -17.4% in US Dollar terms, against the J.P. Morgan EMBI Global Diversified Index, which returned -15.5%<sup>1</sup>.

### **Market Review**

In the trailing six-month period ending 30 September 2022, hard currency emerging markets debt returned -15.5%, driven by the sharp increase in US Treasury yields and credit spread widening. Not only did Treasury yields rise significantly, but they were extremely volatile. In a span of less than two months during parts of August and September, the 10-year Treasury traded in an intra-day range of 2.5% to 4.0%, reaching a psychological threshold not breached since 2008. Yields retreated slightly in the final trading days of the period, but the 10-year still ended nearly 150 basis points higher. Spreads on the JPM EMBI Global Diversified were also volatile, trading in a range of 390-600 basis points. Ultimately, spreads ended the quarter around 150 basis points wider at 559 basis points.

### **Portfolio Review**

#### What Contributed to Returns:

- Underweight Pakistan contributed as the country is at high risk of default and was further pressured by deadly and damaging floods.
- Underweight Ghana also contributed as the government recently initiated discussions with bondholders to restructure its local debt, adding to default concerns.
- Underweight Ukraine contributed as the country's economic fundamentals suffered due to the ongoing Russian invasion.

#### What Detracted from Returns:

- From a top-down perspective, the Fund's general overweight in high yield detracted from relative performance. High yield countries underperformed investment grade countries by over 5% during the period.
- The portfolio's overweight position in the long end of the curve for a handful of investment grade countries was a key detractor as Treasury yields rose.
- Underweight positions in the highest quality countries including China and the United Arab Emirates detracted as these markets benefited from "flight to safety" characteristics.

### Outlook

Given the challenging global backdrop, portfolios are currently positioned conservatively, and we expect to maintain this stance for at least the remainder of 2022. However, our defensive positioning reflects the challenging macro environment rather than significant concerns around bottom-up fundamentals.

We recognise that a lot of negative news is already priced in and valuations across emerging markets debt are discounted, both on a standalone basis and relative to other segments of the credit market. Parts of the market are selectively attractive, particularly BB-rated credits and parts of the investment grade universe offer an attractive mix of high carry, solid bottom-up fundamentals and attractive valuations that provide more than adequate risk compensation.

Yields are at their highest levels in the past decade and at 6-8% are an attractive source of carry for these higher quality credits. Importantly, we believe countries, such as Cote d'Ivoire, have the balance sheet strength and access to capital needed to withstand a prolonged slowdown. Fiscal and current account balances have improved, while debt ratios have receded from recent peaks.

Although foreign reserves have declined across many countries, in part due to capital outflows, reserves remain at comfortable levels. Additionally, commodity-exporting countries have benefited from improved terms of trade. With BB-rated spreads around 70 basis points wider than the start of the year and about 80 basis points above their five-year average, we believe that this segment of the market offers the most compelling return potential.

# Lazard Emerging Markets Bond Fund (continued)

### **Outlook** (continued)

On the other hand, lower rated and distressed credits are highly vulnerable to slowing growth and tighter financial conditions. Most of these countries suffer from one or more of the following challenges: significant financing needs with limited access to capital, political instability, poor or unorthodox economic policy, and weak ESG (environmental, social, and governance) characteristics. While only a handful of countries are at a high risk of default, we expect default rates to remain elevated. Four sovereigns have already defaulted this year, and Ghana recently initiated discussions with bondholders to restructure its local debt.

All data contained herein is sourced by Lazard Asset Management Limited unless otherwise noted as at 30 September 2022.

<sup>1</sup> Source: Lazard. NAV to NAV price, net income reinvested in US Dollars. 'A' accumulation share class net of fees, to 30 September 2022.

Figures refer to past performance which is not a reliable indicator of future results.

# Lazard Emerging Markets Local Debt Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Emerging Markets Local Debt Fund (the "Fund") returned -12.6% in US Dollar terms, against the J.P. Morgan GBI-EM Global Diversified Index, which returned -12.9%<sup>1</sup>.

### **Market Review**

In the trailing six-month period ending 30 September 2022, local currency emerging markets debt returned -13.0% (in US dollar terms). The weakness in local currency debt can essentially be attributed entirely to the record strength of the US dollar. Emerging markets currencies suffered a spot depreciation of around 11% versus the US dollar during the period, but outperformed other developed markets currencies, such as the yen, euro and pound. Local yields also performed better than core market yields. The local index yield rose over 100 basis points to 7.31%. By way of comparison, 10-year yields in the US rose around 150 basis points during the period. Notably, while developed markets central bankers are behind the curve in raising rates, many emerging markets central banks have been proactively tightening monetary policy since early 2021, providing more of a buffer.

### **Portfolio Review**

#### What Contributed to Returns:

- Bottom-up positioning in both local rates and currencies contributed to relative performance.
- Off-index position in Russia, where we held a small legacy position following the country's removal from the index at the end of the first quarter as we saw upside potential and limited downside risk from the severely distressed price levels reached in March. Given the large price increase in the second quarter, we fully exited the position in late June as we saw a window of opportunity to liquidate.
- Underweight low yielders, focused mainly on Central and Eastern Europe (Poland, Hungary, Romania), where the central banks raised rates more than expected to combat higher inflation, and Thailand.

#### What Detracted from Returns:

- A small underweight position in Turkey detracted. Turkey had an outsized gain despite suffering from sky-high inflation, a currency crisis and continued policy errors. Bond market performance has become detached from economic reality due to government policy and a lack of foreign ownership.
- Among the low yielders, a long position in Peru detracted as Peruvian rates were highly correlated with the move higher in US Treasury yields.
- A small off-index position in short-dated local Ukraine bonds on the view that carry was attractive, and that the country was on a positive reform trajectory detracted.

### Outlook

Despite near-term headwinds, our medium-term outlook for local currency debt is constructive. The asset class has been under significant stress for quite some time due to inflation, slowing global growth, tighter financial conditions, and poor risk sentiment. Since the start of 2021, local currency debt has lost a cumulative 27%. However, in recent months local currency debt has proven more resilient than many might have expected given the challenging environment. This likely reflects a confluence of factors, including aggressive and proactive central bank rate hikes in emerging markets, already low valuations, and light investor positioning because of significant fund outflows.

Looking beyond potential near-term volatility, we believe local currency debt may be cushioned against a US recession by a combination of cheap valuations and higher yields. Although local assets tend to suffer when higher inflation and policy tightening result in slower growth, valuations have already adjusted meaningfully, and relatively cheap levels imply a high bar for significant further repricing. Local rates have reached multi-year highs in nominal terms. More importantly, real yields are also high both relative to history and relative to developed markets. Many emerging markets central banks are nearing the end of their monetary tightening cycle, and a few, most notably Brazil, appear to have already reached their terminal rate. We also expect most countries to hit peak inflation before year-end. Thus, we believe local yields are beginning to offer an attractive risk premium and should offer opportunities to receive rates.

# Lazard Emerging Markets Local Debt Fund (continued)

### **Outlook** (continued)

Meanwhile, real effective exchange rates for emerging markets currencies remain near multi-decade lows, especially when compared to commodity prices. However, for local currencies to enter a sustainable rally, "pull" factors are also needed. The most important pull factor would be emerging markets growth outperformance relative to developed markets. Given the headwinds of slowing global growth and tighter financial conditions, we believe it is still too soon to expect sustainable outperformance of local currencies.

Given the near-term risks, we have maintained the portfolio's risk budget usage at a relatively low level, however, we expect meaningful differentiation across both rates and currencies. We have maintained an overall portfolio duration that is less than that of the benchmark. We favour duration primarily in a handful of Latin American countries where central bank tightening cycles are more advanced and real rates are high, such as Brazil and South Africa. In contrast, we have a significant duration underweight in Asian countries where real yields are low.

In currencies, we are generally staying close to home in terms of the portfolio's net currency exposure and overall beta risk, however, we also expect differentiation in currency performance and are therefore more focused on select idiosyncratic cyclical and structural opportunities. We are generally avoiding significant currency exposure in the high yielders and commodity-sensitive currencies, as these would be most vulnerable in a recession scenario. That said, we do see value in the Brazilian real and the Mexican peso where we have funded a long position against the euro. On a more structural basis, we are short currencies in countries, such as Turkey and Egypt, which we believe are in secular decline.

# Lazard Emerging Markets Total Return Debt Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Emerging Markets Total Return Debt Fund (the "Fund") returned -14.1% in US dollar terms.<sup>1</sup>

### **Market Review**

In the trailing six-month period ending 30 September 2022, emerging markets debt returned -14.2% (in US dollar terms), as hard currency debt returned -15.5%, while local currency debt returned -13.0%. Not only did Treasury yields rise significantly, but they were extremely volatile. In a span of less than two months during parts of August and September, the 10-year Treasury traded in an intra-day range of 2.5% to 4.0%, reaching a psychological threshold not breached since 2008. Yields retreated slightly in the final trading days of the period, but the 10-year still ended nearly 150 basis points higher. Sovereign credit spreads were also volatile and ended the period around 150 basis points wider at 559 basis points. Emerging markets currencies suffered a spot depreciation of around 11% versus the US dollar during the period, but outperformed other developed markets currencies, such as the yen, euro and pound. Local yields also performed better than core market yields. The local index yield rose over 100 basis points to 7.31%.

### **Portfolio Review**

While we are disappointed with the absolute performance of the strategy this year, we believe it is important to view performance with a longer-term focus. The market environment since the start of 2020 has been particularly challenging with the broader asset class suffering a cumulative loss of -22.5%. Over the same period, the strategy has delivered on its objective of outperformance with significantly less volatility. The strategy has helped preserve capital with a cumulative loss of less than 11% while realising a volatility that is around 20% lower than that of the index.

#### What Contributed to Returns:

- The portfolio's long position in Brazil local bonds contributed.
- To a lesser extent, portfolio hedges implemented through credit default swap exposure in select countries to manage the portfolio's overall credit risk was beneficial.

#### What Detracted from Returns:

- The main drivers of the absolute decline during the period were the portfolio's sovereign and corporate credit positions, consistent with our emphasis on hard currency while remaining cautious on local currency.
- On a bottom-up basis, diversified exposure to high yield countries including South Africa detracted.
- Within the Fund's corporate credit allocation, small exposure to the Chinese property sector also weighed on returns.

### Outlook

Our defensive positioning is in recognition of the challenging global environment and tighter financial conditions rather than a reflection of significant concerns around bottom-up fundamentals. Markets are pricing in a lot of negative news and valuations across the asset class are significantly discounted (both on a standalone basis and relative to other segments of the credit market). Bottom-up fundamentals are varied across the asset class, and we therefore expect a high degree of differentiation going forward.

Accordingly, we have re-underwritten our investment theses for each country in the portfolio. Higher quality countries have solid balance sheets (e.g., improving deficits, low debt levels, comfortable reserves). We have a high degree of conviction that each name we own in the portfolio has the ability to withstand a mild slowdown and we are therefore comfortable riding out any near-term mark-to-market volatility. We are focused on several fundamentally sound BB credits and a small number of investment grade issuers. Meanwhile, we continue to avoid weaker B credits, such as Egypt, Nigeria, and Turkey, that are more vulnerable due to significant financing needs, political instability, poor economic policies, and/or weak ESG characteristics.

# Lazard Emerging Markets Total Return Debt Fund (continued)

### **Outlook** (continued)

We have recently increased the portfolio's exposure to local rates. We are also taking a very idiosyncratic approach in local duration, emphasising only those countries where real yields are attractive, and the central bank is at or near the end of its tightening cycle. Our long rates positions are focused in just five countries – South Africa, Brazil, Peru, Colombia, and Mexico. Meanwhile, despite very attractive valuations, we continue to have very little exposure to emerging markets currencies as most currency valuations may need to correct further in the near-term given the global environment. That said, we see value in the Brazilian real where inflation peaked a few months ago and the currency should be supported by high real rates.

Finally, we have maintained portfolio hedges in an effort to protect against further downside moves in the asset class. In summary, the global backdrop poses several challenges, but we believe a selective approach can help capture the opportunity afforded by some of the most attractive valuations we have seen in decades, while at the same time mitigating risk.

# Lazard Emerging Markets Debt Blend Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Emerging Markets Debt Blend Fund (the "Fund") returned -16.0% in US Dollar terms, against the 50% J.P. Morgan EMBI Global Diversified ex CCC/50% J.P. Morgan GBI-EM Global Diversified Index, which returned -13.2%<sup>1</sup>.

### **Market Review**

In the trailing six-month period ending 30 September 2022, emerging markets debt returned -14.2% (in US dollar terms), as hard currency debt returned -15.5%, while local currency debt returned -13.0%. Not only did Treasury yields rise significantly, but they were extremely volatile. In a span of less than two months during parts of August and September, the 10-year Treasury traded in an intra-day range of 2.5% to 4.0%, reaching a psychological threshold not breached since 2008. Yields retreated slightly in the final trading days of the period, but the 10-year still ended nearly 150 basis points higher. Sovereign credit spreads were also volatile and ended the period around 150 basis points wider at 559 basis points. Emerging markets currencies suffered a spot depreciation of around 11% versus the US dollar during the period, but outperformed other developed markets currencies, such as the yen, euro and pound. Local yields also performed better than core market yields. The local index yield rose over 100 basis points to 7.3%.

### **Portfolio Review**

#### What Contributed to Returns:

- Local rates positioning contributed to relative performance. Specifically, underweight low yielders, focused mainly on Central and Eastern Europe (Poland, Hungary, Romania), where the central banks raised rates more than expected to combat higher inflation, and Thailand.
- The Fund's off-index position in corporate credit also helped, as a bias towards shorter-dated issues was beneficial amid the rising rate environment.
- Underweight Pakistan contributed as the country is at high risk of default and was further pressured by deadly and damaging floods.

#### What Detracted from Returns:

- Sovereign credit positioning was the main detractor from relative performance. Within this allocation, the Fund's general overweight in high yield detracted from relative performance as high yield countries underperformed investment grade countries by over 5% during the period.
- The portfolio's overweight position in the long end of the curve for a handful of investment grade countries was a key detractor as Treasury yields rose.
- Underweight positions in the highest quality countries including China and the United Arab Emirates detracted as these markets benefited from "flight to safety" characteristics.

### Outlook

Given the challenging global backdrop, we expect to maintain a conservative stance in the near term, although we continue to view emerging markets debt valuations as attractive. In sovereign credit, we favour BB-rated and select investment grade credits that offer high carry, solid bottom-up fundamentals and attractive valuations, with yields at their highest levels in the past decade. On the other hand, we are avoiding lower quality countries that are highly vulnerable to slowing growth and tighter financial conditions. In local debt, we have maintained an underweight duration position expressed primarily in Asian countries with low real yields. In contrast, we favour duration primarily in a handful of Latin American countries where central bank tightening cycles are more advanced and real rates are high. We are generally avoiding significant currency exposure in the high yielders, but favour select opportunities such as the Brazilian real and the Mexican peso.

# Lazard Emerging Markets Corporate Debt Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Emerging Markets Corporate Debt Fund (the "Fund") returned -10.4% in US Dollar terms, against the J.P. Morgan CEMBI Broad Diversified Index, which returned -8.1%<sup>1</sup>.

#### **Market Review**

In the trailing six-month period ending 30 September 2022, emerging markets corporate debt returned -8.1%, driven by the sharp increase in US Treasury yields and credit spread widening. Financial markets were weighed down by a confluence of factors, including stubbornly high inflation, aggressive monetary tightening by central banks, Europe's energy crisis, repeated China lockdowns, and questionable fiscal policy decisions in the United Kingdom. The 10-year US Treasury yield ended the period nearly 150 basis points higher. Meanwhile, spreads on the J.P. Morgan CEMBI Broad Diversified Index were volatile and ended the period over 80 basis points wider at 385 basis points.

### **Portfolio Review**

#### What Contributed to Returns:

- The portfolio's overweight position in financials contributed as the sector benefited from relatively defensive characteristics.
- Underweight consumer companies also contributed as the sector underperformed on global growth concerns.

#### What Detracted from Returns:

- The Fund's position in Chinese real estate company Country Garden was the largest detractor as the sector as whole continues to struggle with liquidity and soft end markets resulting from government policies in the sector and a lackluster Chinese economy.
- From a sector standpoint, a modest overweight position in the oil and gas sector detracted as recession concerns weighed on the outlook for the sector.
- To a lesser extent, the portfolio's lack of positions in Ukraine detracted as bond prices rallied from severely distressed levels.

### Outlook

We are highly constructive on emerging markets corporates both on a standalone basis as well as relative to developed markets corporates. Despite the challenging global backdrop, emerging markets corporate fundamentals remain resilient overall, and valuations have adjusted considerably.

Inflationary pressures and central bank tightening into slowing global growth will undoubtedly mean falling revenues and profits and rising input costs for many companies. However, most corporates are entering this environment from a position of balance sheet strength which should help weather the storm without sustaining material credit deterioration. Leverage has decreased from 2020 levels across all regions with net leverage falling to 1.5x, which is a decade low for emerging markets and more than a full turn below levels seen in US corporates.

Thus, we would not expect a mild slowdown to push leverage to uncomfortable levels. Earnings margins are healthy, and most issuers have strong liquidity profiles because of refinancing their debt at low rates over the past several years. Additionally, some companies, such as commodity producers, may in fact benefit from higher inflation. Consequently, we expect corporate fundamentals to remain resilient. The corporate market has very little exposure to the stressed frontier sovereign markets that are most vulnerable due to fragile economies and concerns over debt sustainability. All in all, while default rates will inevitably increase in the event of an economic slowdown, we believe default rates outside of the China property sector should be relatively well-contained.

All data contained herein is sourced by Lazard Asset Management LLC unless otherwise noted as at 30 September 2022.

<sup>1</sup> Source: Lazard. NAV to NAV Price, net income reinvested in US Dollar terms, 'A' accumulation share class net of fees, to 30 September 2022.

# Lazard Asset Management LLC 30 September 2022

Lazard Global Investment Funds plc

# Lazard Scandinavian High Quality Bond Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Scandinavian High Quality Bond Fund (the "Fund") returned -10.6% in euro terms.<sup>1</sup>

### **Market Review**

At the beginning of the reporting period economic recovery in Scandinavia continued despite the beginning of the war in Ukraine, mainly driven by Scandinavia's lower dependence on Russian energy and gas compared to the euro zone. However inflationary pressures in Sweden started to rise on the back of an increase in food and energy prices.

In general, the Scandinavian economies continue to be significantly better positioned than many countries in the euro zone. Norway benefits from its position as the main gas supplier for Europe. In addition, Sweden is currently Europe's largest exporter of electricity thanks to a clever energy mix and a conscious reduction in Russian energy dependency over the years. Nevertheless, growth will also weaken here in the coming quarters due to the combination of capacity bottlenecks, rising prices and increasing interest rates.

Besides geopolitical risks, monetary policy is a major focus of attention as well. Due to persistently high inflation, the Swedish central bank raised rates three times by a cumulative 175 basis points during the period. Interest rates were also raised three times in Norway during the period, but only by 150 basis points. There are indications that Norway's central bank could be one of the first central banks to end the hiking cycle. By contrast, the Danish central bank's policy is limited to defending the currency peg of the Danish krone to the euro.

### **Portfolio Review**

#### What Contributed to Returns:

- Our approach to active duration management and monitoring, in particular duration hedging, had a positive impact on the Fund's performance.
- Our exposure to Norwegian rates contributed somewhat positively to performance over the six-month cycle as these bonds have performed better in the current environment relative to their European counterparts.
- Our active approach in asset allocation contributed to the Funds' performance, in particular a reduction and more defensive positioning in DKK callables in the summer, which prevented further losses.

#### What Detracted from Returns:

- Our exposure to corporate bonds from Scandinavian issuers contributed negatively to performance due to widening credit spreads and rising risk aversion.
- The allocation to Danish callable covered bonds was not helpful for performance either. Continuing high interest rate volatility and widening risk premiums weighed on our position in Danish covered bonds with call options.
- Yields have largely increased across the globe. Even Scandinavia has not been able to escape this trend. Due to that, duration impacted negatively on the Fund's performance. However, in line with our strategy, the relative defensive duration positioning could mitigate the negative effects of rising yields a bit.

### Outlook

In addition to the war in Ukraine, energy prices and inflation remain the main topics for global capital markets in the short term, thus volatility is likely to remain elevated. In our opinion, bond markets have priced in interest rate normalization, making current entry levels for high-quality investments in Scandinavia particularly attractive. Especially, the market for Danish covered bonds with a call option appears to be significantly undervalued, as the fundamental credit quality continues to be AAA rated, convexity risks are at a historical low, and the risk premia are significantly higher than in other asset classes while the rating is even better.

Lazard Asset Management (Deutschland) GmbH 30 September 2022

# Lazard Commodities Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Commodities Fund (the "Fund") returned -10.6% in US Dollar terms against the Bloomberg Commodity Total Return Index (BCOMTR), which returned -9.5%<sup>1</sup>.

### **Market Review**

Energy was the only sector with a positive return within the BCOM commodity markets for the six-month period, returning 1.3%. The agriculture sector returned -5.9%, followed by the livestock sector which was down -6.4%. Precious metals fell -17.3% and finally, industrial metals significantly underperformed the index, returning -31.7%.

Within energy, the only commodities that had a positive return were natural gas and heating oil. All other commodities in all other sectors generated negative returns. Natural gas led the way as the war in Ukraine continued to tighten the flow of natural gas to Europe. The rest of the commodity complex had negative returns as central banks tightened monetary policy, leading to increased fears of recession and significant US dollar strength. Metals, both base metals and precious metals, were the most sensitive to the higher interest rate environment and strength in the US dollar. The worst performers were Aluminium (-38%), Nickel (-34%), Copper (-28%), and Zinc (-26%) all discounting weaker demand and dollar strength.

Supply discipline remains extremely robust across the commodities complex and in some sectors, such as energy and agriculture, discipline has become disruption because of the Russian invasion of Ukraine and significant drought conditions elsewhere. The tighter commodity supply cycle in which we now find ourselves in has been developing over the past few years. The three main factors that best explain the cycle are the following:

**Climate:** investors have demanded commodity producers reduce their green-house-gas emissions (GHG) and produce more environmentally friendly products. This is clearest in the Energy sector, where oil and gas producers have been told by investors to keep unwanted barrels off the market, reduce debt, buy back stock, invest in the energy transition, and pay dividends. This has led to lower for longer inventories as supply is not responding.

**COVID-19:** the pandemic created supply-chain bottlenecks and a labour shortage in energy, metals, and mining production. Fewer workers means that cost of labour has been rising and growth has been slower.

**Conflict:** Russia's invasion of Ukraine has disrupted significant amounts of critical commodities such as natural gas, fertiliser, and edible oils. The situation has been exacerbated by the prior two factors as investors in commodity producers are now looking for dividend yield and higher returns on capital that the producers are able to provide so long as they are not investing in growth.

Despite superior returns year-to-date, commodities as an asset class were second to the performance of US bonds as market correlation increased significantly due to much tighter monetary policy, US dollar strength and fears of a sharp economic slowdown contributed to negative returns across all asset classes.

### **Portfolio Review**

#### What Contributed to Returns:

The top four performing sectors that contributed positively to performance were:

- Energy Positive performance came from our overweight in heating oil, gas oil, and crude oil.
- Precious Metals Positive performance was a result of our underweight positions in silver and gold.
- Agriculture our overweight positions in corn, Kansas wheat, soybeans, and a position in a US fertiliser producer, contributed positively to performance.
- Livestock Positive performance came primarily from our underweight position in lean hogs.

#### What Detracted from Returns:

The bottom performing sector that detracted from performance was:

• Industrial Metals – Positive performance from our underweight positions in nickel and zinc was more than offset by our overweight position in aluminium and our underweight position in copper.

# Lazard Commodities Fund (continued)

### Outlook

We believe that commodities as an asset class will continue to deliver positive returns for investors as current supply appears to be more constrained than current demand. The main headwinds to prospective commodity demand are coming from higher interest rates and US dollar strength.

Consequently, we are more focused on agricultural- and energy-related commodities where we believe the demand is most current and less likely to be deferred or destroyed as opposed to metals. In our outlook we assume that inflation will remain elevated over the next year as we do not see supply responding yet to elevated commodity prices. In fact, just the opposite is true. In the energy space, non-OPEC supply is growing well below normal and OPEC+ (which includes Russia), is in fact cutting back supply even though their 2016 objective to reduce OECD inventories to below 2.7bn barrels was already achieved in June.

Although maybe to varying degrees, this pattern of below average investment in new commodity supply is similar across the commodity complex. Aside from the war in Ukraine, which has disrupted supply, low unemployment, and weather have also contributed to tighter inventories in energy, agriculture, and metals. Weather is an increasingly important issue in relation to grains along with low grain inventories and the rising cost of inputs such as fertiliser and labour. Higher interest rates will also cause suppliers to rethink and recalculate any new projects that were more viable in a lower interest rate environment.

We have been of the view that US dollar strength would abate given its already very strong move over the past six months. As already mentioned, US dollar strength is a significant headwind to commodity demand. With inflation running in the high single digits, we believe that the US central bank will likely continue to tighten monetary policy until they see a material drop in inflation. Barring a liquidity crisis caused by credit or currency, we do not anticipate a change in monetary policy stance from the US or other central banks over the near term. Higher rates will compel commodity producers to require materially higher commodity prices to cover the cost of capital of new production.

All data contained herein is sourced by Lazard Asset Management Limited unless otherwise noted as at 30 September 2022.

# Lazard Diversified Return Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Diversified Return Fund (the "Fund") returned -9.2% in US Dollar terms against the Secured Overnight Financing Rate Index, which returned 0.7%<sup>1</sup>.

### **Market Review**

During the period, world equity markets fell sharply as the global economic outlook dimmed amid a series of interest rate hikes. High inflation forced central banks to abandon pandemic-era, ultra-low interest rate policies in favour of monetary tightening. At the forefront of these efforts was the US Federal Reserve, which pursued an aggressive rate-hiking campaign starting in March that would ultimately result in four increases to its short-term interest rate during the April-September period.

Markets initially reacted positively to the US Federal Reserve's (Fed) stance, but stocks soon came under pressure as it became clear that the US central bank was determined to rein in soaring price growth, even if it meant tipping the US economy into a recession. Amid a steady drumbeat of rate hikes from the Fed, the yield on the benchmark 10-year US Treasury note increased 148 bps in the six-month period to 3.80%.

The Fed's actions were part of a larger wave of central bank-engineered monetary tightening that swept across much of the world during the period. In Europe, where the Russia-Ukraine conflict has led to soaring energy prices (resulting in rampant inflation), the European Central Bank raised its benchmark rate twice while in the UK, the Bank of England did so four times. Meanwhile, in Asia, the Bank of Japan (BoJ) remained an outlier among key central banks by maintaining its loose monetary policy despite some signs that Japan's low-inflation environment was changing. As a result of the divergence in monetary policies between the BoJ and the Fed, the yen weakened significantly against the US dollar.

### **Portfolio Review**

#### What Contributed to returns:

- Stock selection in the information technology, consumer staples, and financials sectors within equity.
- Underweight exposure to the mortgage sector, Europe, the UK, Japan, and South Korea within fixed income.
- Exposure to Commodities, the fundamental European long/short basket, and Sustainable Agriculture within the diversifiers.

#### What Detracted from returns:

- Stock selection in the utilities, industrials, and communication services sectors within equity.
- Underweight exposure to rates in China, and overweight exposure to Australia, Canada, New Zealand, Thailand, and the US within fixed income.
- Exposure to the Health Care basket and the Demographic Opportunities basket within the diversifiers.

### Outlook

After selling off in the first half of the year, markets have improved since mid-June, reflecting in the first instance anticipation of an increase in negative earnings revisions and, in the second, the possibility of a "soft landing" for the economy. We believe substantial risks remain to this idea: economic data reflects slowing that should become more noticeable and, despite the desire among investors to see an inflection point for inflation, if structural pressures continue even as the economy softens, the Fed and other central banks may be slow to ease the restraint posed by higher interest rates, potentially resulting in a recession.

All data contained herein is sourced by Lazard Asset Management LLC unless otherwise noted as at 30 September 2022.

<sup>1</sup> Source: Lazard Asset Management, NAV to NAV Price, net income reinvested in US Dollars, 'C' accumulation share class net of fees, to 30 September 2022.

Figures refer to past performance which is not a reliable indicator of future results.

# Lazard European Alternative Fund

### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard European Alternative Fund (the "Fund"), returned -1.3% in Euro terms, against the MSCI Europe Net Total Return Index, which returned  $-12.7\%^{1}$ .

### **Market Review**

Central banks' fight against inflation continued as both the Federal Reserve and the European Central Bank delivered 75 basis points interest rate hikes at their latest meetings and indicated their resolve to continue the fight until inflation comes under control. History suggests that this is the right approach to tackle inflation when it has hovered at high levels for a long time.

The UK Chancellor surprised the market with his "mini" budget by announcing income and corporate tax cuts. This was not taken well by the financial markets. Sterling saw one of its biggest one-day devaluations against the US dollar and UK gilt yields exploded. The Bank of England had to step in to rein in some of the damage done by the Government, and the Chancellor later rolled back certain income tax deductions promised for top earners.

The UK is going through a cost-of-living crisis but the idea of borrowing more in order to increase spending is not a cure for the problem. If the Government borrows too much, sterling will devalue, and it will stoke inflation next year as the UK relies heavily on a broad set of imports for daily consumption. The possible solution for the UK is to increase the supply of goods, energy, services, and skills. This can be achieved by fast tracking the planning system, relaxing controls on economic migration, introducing energy market reforms and the liberalisation of trade tariffs. However, while these supply side measures fit economic theory in situations such as these, in practice they are politically difficult to achieve.

Whilst the mini budget resulted in a mini sovereign crisis in the UK, we see increasing signs of stress in the credit market in Continental Europe. We notice that certain investment banks in the US have been unable to offload debt in a couple of leveraged buyout deals last month. Furthermore, the issuance of investment grade corporate debt in September was nearly half that of the issuance seen over the last three years. Lastly, US 30-year mortgage rates are at 20-year highs—at over 7% compared to less than 3% at the beginning of 2022. All of this suggests that refinancing/increasing debt for corporates and consumers is becoming very difficult.

### **Portfolio Review**

During the period, our long book lost -1108 basis points, while our short book made +1032 basis points, of which +126 basis points was from hedges and cash, and +906 basis points from single name shorts.

#### What Contributed to Returns:

- On the long side, we made +67 basis points in Aixtron, +52 basis points in Prosus, and +43 basis points in Bankinter.
- On the short side we made +75 basis points in a food manufacturer, +62 basis points in a sporting goods company, and +60 basis points in a semiconductor stock.

#### What Detracted from Returns:

• On the long side, the largest losses were in Vestas (-67 basis points), Zalando (-58 basis points) and Tesco (-56 basis points). There were no notable losses to report in the short book.

### Outlook

In our portfolio, we are extremely careful about owning stocks with geared balance sheets. At this stage, we are more inclined to own stocks with a net cash position. With that in mind, we have recently added BMW where net cash on its balance sheet accounts for around half of the market cap and given its cash distribution policy, we would expect a dividend yield of 11% based on earnings estimates for FY'22. The stock should also benefit from a recovery in its Chinese operations where demand for premium cars seems to be picking up nicely post a period of weakness due to the intermittent lockdowns in H1'22.

# Investment Manager's Report (continued)

# Lazard Rathmore Alternative Fund

#### **Investment Review**

Over the six-month period ending 30 September 2022, the Lazard Rathmore Alternative Fund (the "Fund") returned -6.8%<sup>1</sup>.

### **Market Review**

The second quarter of the year saw a broad-based continuation of many of the market dynamics and technical factors observed during the first quarter, as risk assets remained for sale, and the repricing of most major assets classes—equities, credit, interest rates, volatility, commodities, and currencies—endured and, in some cases, accelerated. Sustained risk-off sentiment across the quarter was fueled by continued concerns surrounding rising interest rates, elevated inflation measures, central bank action, slowing global economic growth, and the potential for a global recession in the coming year. Equity volatility, as per the VIX Index, increased by 38% from month-end March to month-end June, ultimately reflecting an increase of 70% on a year-to-date basis.

Moving into the third quarter, global equity markets moved higher in July and August, but sold-off in September, as many of the factors plaguing markets year-to-date (outlined above) worsened as the quarter ended. In addition to the challenging inflation and interest rate backdrop, the war in Ukraine reached a new dangerous stage, and there was turmoil in the UK which caused sterling to plummet to levels not seen since the 1980s. Interest rates rose throughout the quarter, as major central banks continued to follow a path of tighter monetary policy. Most broad-based equity indices finished the quarter lower, wiping out any gains realised earlier in the quarter. The VIX Index, a measure of equity market volatility, increased nearly three points over the quarter and US High Yield market spreads, as measured by the High Yield Credit Default Swap Index, widened modestly over the quarter.

### **Portfolio Review**

#### What Contributed to Returns:

- The Intercept Pharmaceuticals (ICPT) 3.5% convertibles added to returns as the company repurchased the bonds at a premium to prevailing market price.
- The Air Canada (AC CN) 4% convertibles added to returns as the company repurchased the bonds at a premium to prevailing market price.
- The portfolio-level interest rate hedge added to returns over the past six months, as interest rates, notably short-term rates, increased dramatically.

#### What Detracted from Returns:

- Negatively impacting performance were the Avaya Holdings (AVYA) 8% convertibles, which declined following weaker-thanexpected quarterly results, concerns surrounding disclosures related to a senior-secured capital raise, and a credit downgrade.
- The Amyris Inc (AMRS) 1.5% convertibles were negatively impacted by cheapening in credit, broadly.
- The Fisker Inc (FSR) 2.5% convertibles were negatively impacted by a cheapening in credit, broadly.

### Outlook

The absolute value proposition, associated with the sources of return to the strategy, has more than doubled on a year-to-date basis. Special Situations activity, while muted on a year-over-year basis, has begun to pick-up as issuers increasingly have fewer marketplace options available to them providing the ability to address their evolving capital structure goals and needs. While issuance year-to-date has been muted, the primary market has picked up in recent weeks, featuring coupons attractive pricing. Selling from long-only bondholders has tended to exhibit a stop-start dynamic, associated with the broader macro backdrop. At some point soon, this selling dynamic should exhaust itself.

Capital flows into the space have been robust, with notable interest from newer cross-over buyers (yield buyers looking to participate in equity upside on dramatically discounted stock prices), including a handful of new hedge fund entrants into the space. Liquidity remains supportive of the broader opportunity set, with approximately \$2.5 billion in paper trading per day. With a marketplace that is now approximately \$375 billion in size, this means that the entire asset class, based on current daily trading volumes, rolls every eight months.

# Lazard Rathmore Alternative Fund (continued)

### **Outlook** (continued)

Broadly speaking, the notable decline in the investable size of the asset class (-35% to -40%) very tepid (albeit increasing) primary year-to-date, and paper maturing or rolling off via special situation exits and early conversions on deep-in-the money converts, means that while the opportunity set and demand have increased notably, supply has decreased. This should be very supportive of the basis and valuations on a forward-looking basis.

## Lazard Coherence Credit Alternative Fund

#### **Investment Review**

Over the six-month period ended 30 September 2022, the Lazard Coherence Credit Alternative Fund (the Fund) returned -0.2% in US Dollar terms against the HFRX Fixed Income Credit NR USD Index which returned -9.0% and the Bloomberg US Corporate High Yield TR USD Index which returned -10.4%<sup>1</sup>.

#### **Market Review**

The market was very volatile during this period as the Federal Reserve aggressively increased rates in the U.S. as inflation continued to rise in light of higher energy prices as a result of the war in Ukraine. Global tensions were on the rise as many feared Russia would potentially use nuclear options in Ukraine as they found it difficult to move their military offensive to a positive conclusion. Rising inflation and energy shortages impacted already struggling supply chains creating shortages in everything from food to semiconductors. With interest rates and qualitative tightening in full swing in the U.S., it was Europe's turn to start the process of moving away from negative rates as the ECB began raising borrowing rates.

### **Portfolio Review**

The portfolio was invested in very conservative short-dated maturity IG credit during this period. High quality names that had good earnings that were also upgrade candidates dominated the portfolio. Short positions in issuers that had bloated balance sheets, sectoral tailwinds and the potential for restructuring balance sheets and capital structures made up portfolio shorts. All of our interest rate exposure was and is fully hedged in the portfolio. Our view was that HY would suffer during this period and we chose to be defensive in how we positioned the portfolio. Sectors that performed well for us during the six months of 3/2022- 9/2022 included Airlines (American Airlines); Industrials (Caterpillar); Financials (Deutsche Bank); Consumer Products (Diageo) and Autos (General Motors)

### Outlook

The credit market has been in a bear market since November 2021. As a result, yields have repriced significantly higher primarily driven by rising Treasury interest rates and not deteriorating credit quality. We believe the next few years will be about the market adjusting to changing credit and earnings metrics. Therefore, we expect further credit spread widening.

Moderating inflation has come from contracting economic growth signaled by lower oil and commodity prices. Several large companies have announced slower hiring, hiring freezes, and job cuts. ISMs and PMIs are headed into contraction.

That said, in our view, the economy is working with a cushion: Unemployment remains low, jobs are plentiful, wages are still rising, and household leverage is the lowest in 50 years.

Powell reiterated hawkishness at the September Fed meeting and raised the "dot plot", implying 75 bps hike in November, 50-75 bps in December, and more hikes in 2023.

We believe we are in a mild recession already and we see default rates rising to 5 percent and higher if including private credit in 2023.

# 1. General

Lazard Global Investment Funds plc (the "Company") was incorporated on 3 February 2009 as an open-ended investment company with variable capital structured as an umbrella fund and with segregated liability between its sub-funds (individually referred to as the "Fund" and collectively the "Funds") organised under the laws of Ireland. The Company qualifies and is authorised in Ireland by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities under the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) (the "UCITS Regulations") and the Central Bank's (Supervision and Enforcement) Act 2013 (section 48(1)) UCITS Regulations 2019 (as amended), (the "Central Bank UCITS Regulations"). The Company is structured as an umbrella fund in that the Share capital of the Company may be divided into different classes of Shares with one or more classes representing a separate Fund of the Company.

The Company currently has twenty Funds in existence, sixteen of which are active. As at 30 September 2022, Lazard Global Quality Growth Fund, Lazard Thematic Inflation Opportunities Fund (launched on 21 June 2022), Lazard Global Convertibles Investment Grade Fund, Lazard Global Convertibles Recovery Fund, Lazard Emerging Markets Bond Fund, Lazard Emerging Markets Local Debt Fund, Lazard Emerging Markets Total Return Debt Fund, Lazard Emerging Markets Debt Blend Fund, Lazard Emerging Markets Debt Unrestricted Blend Fund, Lazard Emerging Markets Corporate Debt Fund, Lazard Scandinavian High Quality Bond Fund , Lazard Commodities Fund, Lazard Diversified Return Fund, Lazard European Alternative Fund, Lazard Rathmore Alternative Fund and Lazard Coherence Credit Alternative Fund were funded. The investment objectives of each Fund within the Company are set out in the Prospectus and relevant Supplements for the Funds. Lazard Opportunities Fund closed on 7 November 2016 and Lazard Global Hexagon Equity Fund closed on 18 August 2017. Lazard Demographic Opportunities Fund was approved by the Central Bank on 21 December 2021 but has not yet launched. Lazard Nordic High Yield Bond Fund has been approved by the Central Bank on 29 August 2022 and launched on 1 November 2022.

# 2. Significant Accounting Policies

The significant accounting policies and estimation techniques adopted by the Company in the preparation of these condensed interim unaudited financial statements are set out below. All references to net assets throughout the financial statements refer to net assets attributable to holders of Redeemable Participating Shares unless otherwise stated.

## Statement of compliance

The condensed financial statements for the financial period ended 30 September 2022 have been prepared in accordance with Financial Reporting Standard ("FRS") 104: "Interim Financial Reporting", issued by the Financial Reporting Council and the UCITS Regulations.

The condensed financial statements should be read in conjunction with the audited financial statements for the financial year ended 31 March 2022, which have been prepared in accordance with FRS 102: "The Financial Reporting Standard applicable in the United Kingdom and the Republic of Ireland" ("FRS 102") and applicable Irish legislation.

The same accounting policies, presentation, estimates, judgments and methods of computation have been followed in this unaudited interim report and financial statements as were applied in the preparation of the Company's annual audited financial statements for the financial year ended 31 March 2022.

This interim report and financial statements are unaudited. We note that the statutory auditor's report in the Company's annual audited financial statements for the financial year ended 31 March 2022 was unqualified.

## **Basis of preparation**

The financial statements are prepared under the historical cost convention as modified by the revaluation of financial assets and financial liabilities held at fair value through profit or loss.

The financial statements have been prepared on a going concern basis and in accordance with FRS 104 and the provisions of the Irish Companies Act, 2014 and the UCITS Regulations.

The Company's management has made an assessment of the Company's ability to continue as a going concern and is satisfied that the Company has the resources to continue in business for the foreseeable future. Furthermore, the management is not aware of any material uncertainties that may cast significant doubt upon the Company's ability to continue as a going concern. Therefore, the financial statements continue to be prepared on a going concern basis for all Funds.

# 2. Significant Accounting Policies (continued)

## **Basis of preparation (continued)**

The Company has availed of the exemption available to open-ended investment funds under FRS 102, Section 7 "Statement of Cash Flows" not to prepare a cash flow statement on the basis that substantially all of the Company's investments are highly liquid and carried at fair value, and the Company provides a Statement of Changes in Net Assets Attributable to Redeemable Participating Shareholders. Certain reclassifications have been made to previously reported amounts to conform to current period presentation, which had no impact on reported net assets.

## **Foreign Exchange Translation**

(a) Functional and presentation currency: Items included in the Company's financial statements are measured using the currency of the primary economic environment in which it operates (the "functional currency"). This is US Dollar ("USD") except for Lazard Global Convertibles Investment Grade Fund, Lazard European Alternative Fund and Lazard Scandinavian High Quality Bond Fund in which cases it is Euro ("EUR"). The Company has adopted the functional currency of each Fund as the presentation currency for these financial statements. The functional currency has been adopted as the presentation currency at Fund level and at Company level, USD is the presentational currency.

For the purpose of combining the financial statements of each Fund to arrive at the consolidated figures, the financial assets and financial liabilities in the financial statements have been translated to USD at the exchange rate at 30 September 2022. The amounts in the Statement of Comprehensive Income and in the Statement of Changes in Net Assets Attributable to Redeemable Participating Shareholders have been translated to USD using an average rate for the financial period as an approximation for actual. This has no effect on the NAV per Share attributable to the individual Fund. All exchange rates are disclosed in Note 7.

The foreign currency translation adjustment of USD (118,779,165) (30 September 2021: USD (17,213,003)) included in the "Statement of Changes in Net Assets Attributable to Redeemable Participating Shareholders" reflects the movement in exchange rates for the financial period. This is a notional amount which has no impact on the results of the individual Funds.

(b) Assets and liabilities other than those denominated in the functional currency of each Fund are translated into the functional currency at the exchange rate ruling at the financial period end. Transactions in foreign currencies are translated into the functional currency at the exchange rates ruling at the dates of the transactions. The resulting gain or loss arising on translation of securities and other assets and liabilities is included in net movement in unrealised gains and losses on investments/currency. Forward currency contracts which are outstanding at the financial period end are valued at financial period end forward rates. The resulting unrealised gain or loss is included in net movement in unrealised gains and losses on investments/currency. Realised gains and losses arising between the transaction and settlement dates on purchases or sales of securities denominated in the non-base currencies and on settled forward foreign currency exchange contracts are included in net realised gains and losses on investments/currency.

## 3. Fees

## **Management Fees**

The Manager has responsibility for the management and administration of the Company's affairs and the distribution of the Shares, subject to the overall supervision and control of the Directors.

The Manager is entitled to a charge per annum of the NAV attributable respectively to each of the following Share classes.

Such fees as detailed below shall accrue daily and be payable monthly in arrears. The Manager shall also be entitled to be reimbursed by the Funds for its reasonable out-of-pocket expenses.

\* Lazard Thematic Inflation Opportunities Fund launched on 21 June 2022.

See Note 16 for information on the launch and termination dates of the above Share classes.

Investors are only permitted to hold units in the X Share class where Lazard or an affiliate are appointed as the investment managers to carry out investment management or advisory services on their behalf. Shareholders in the class will be subject to a fee with regard to their investment in the Funds based on the Investment Management Agreement between themselves and the Investment Managers or a Lazard affiliate. Shares in the M Classes are available only to other Funds managed or advised by an affiliate or to such other persons as the Manager may determine from time to time.

The Manager has delegated the performance of the investment management function in respect of the Funds to the Investment Managers. The Manager will be responsible for discharging the fees and expenses of the Investment Managers, the Promoter and the Distributor out of its fee. For the financial period ended 30 September 2022, management fees of USD 17,282,590 (30 September 2021: USD 16,497,611) were charged of which USD 5,674,801 (31 March 2022: USD 2,927,226) remained payable at the financial period ende.

## **Performance Fees**

The Manager is entitled to receive a performance fee in respect of Lazard Emerging Markets Total Return Debt Fund, Lazard Coherence Credit Alternative Fund, Lazard European Alternative Fund and Lazard Rathmore Alternative Fund. Below is a description of how this fee is calculated for each Fund.

#### Lazard Emerging Markets Total Return Debt Fund

The Manager is entitled to receive a performance fee (the "Performance Fee"), accrued daily and which crystallises and becomes payable only once annually (or otherwise on redemption of the relevant Shares), in respect of each of the Share classes in the Fund excluding the D Classes, the X Classes and the M Classes, equal to 20% of the Net Gain, if any, during the relevant Performance Period (the "Performance Period"). No Performance Fee shall be charged to the assets of the D Classes, the X Classes or the M Classes. A Performance Fee in respect of each relevant Share class shall accrue and become due and payable only in the event that both of the conditions below are met:

- i) the Ending NAV per Share for any Performance Period has exceeded the Hurdle NAV per Share; and
- ii) the Ending NAV per Share for the applicable Performance Period, (or as at the date the relevant Shares are redeemed), exceeds the High Water Mark.

## **Performance Period**

The first Performance Period for each relevant Share class shall commence as of the first Business Day following the closure of the Initial Offer Period for that class and not earlier than 12 months later on the last Valuation Point of the then current calendar year. Each subsequent Performance Period shall commence immediately on the end of the prior Performance Period and end on the last Valuation Point of the next following calendar year (or otherwise on the date by reference to which the last NAV for the relevant Share class is calculated).

## **Performance Fees (continued)**

#### Lazard Emerging Markets Total Return Debt Fund (continued)

#### **Ending NAV per Share**

With respect to each class of Shares apart from the Unhedged Share Classes, the Ending NAV per Share is the Net Asset Value per Share of the relevant class as at the Valuation Point immediately prior to the accrual of any applicable Performance Fee.

With respect to each Unhedged Share Class, the Ending NAV per Share is the NAV per Share of the relevant class as described in the preceding paragraph, but expressed in the Fund Base Currency as calculated using the Prevailing Exchange Rate on the relevant date.

#### Hurdle NAV per Share

The Hurdle NAV per Share is calculated by applying an annualised hurdle rate of 5% as at the date of accrual of the Performance Fee (the "Hurdle Rate") to:

- i) the opening NAV per Share of the relevant class for the then current Performance Period or, where the relevant class is an Unhedged Share Class, to the opening NAV per Share of the relevant class for the then current Performance Period as expressed in the Fund Base Currency (using the Prevailing Exchange Rate on the relevant date) (the "Opening NAV per Share"), or
- ii) where the current Performance Period is the first Performance Period for the relevant class, to the Initial Offer Price per Share for the relevant Shares or, where the relevant class is an Unhedged Share Class, to the Initial Offer Price per Share for the relevant Shares as expressed in the Fund Base Currency (using the Prevailing Exchange Rate on the relevant date).

The Hurdle Rate will be prorated for Performance Periods less than one year.

The Hurdle NAV per Share will be adjusted for any appropriate dividend paid.

#### **High Water Mark**

With respect to each class of Shares apart from the Unhedged Share Classes, the High Water Mark is the greater of: (i) the previous highest NAV per Share of the relevant Share class (after deduction of any applicable Performance Fee and any applicable dividend) on the last Valuation Point for any previous Performance Period for which a Performance Fee was paid or accrued; or (ii) the Initial Offer Price per Share of the relevant Share class.

With respect to each Unhedged Share Class, the High Water Mark is the greater of (i) or (ii) above each as expressed in the Fund Base Currency using the Prevailing Exchange Rate on the relevant date.

The High Water Mark will be adjusted for any appropriate dividend paid.

A Performance Fee is only ever payable or paid on the increase of the relevant Share classes' Net Asset Value over the relevant High Water Mark or the relevant Hurdle NAV per Share, whichever is higher. Excess performance is calculated net of all costs before any performance fee accrual.

"Prevailing Exchange Rate" means the exchange rate prevailing as between the currency in which the relevant Unhedged Share Class is denominated and the Fund Base Currency.

#### Net Gain

With respect to each relevant Share class, the "Net Gain per Share" is the difference between the Ending NAV per Share and the higher of (1) the Hurdle NAV per Share and (2) the High Water Mark. "Net Gain" is the Net Gain per Share multiplied by the average number of Shares of the relevant class in issue during the period commencing on the date on which the then current Performance Period began and ending on the accrual date. The average number of Shares will be adjusted to take account of redemptions during the relevant period.

## **Performance Fees (continued)**

#### Lazard Emerging Markets Total Return Debt Fund (continued)

#### General

For each Share class (excluding the D Classes, the X Classes and the M Classes) the Performance Fee will be calculated by taking the Net Gain for the relevant class for the applicable Performance Period and multiplying the resultant figure by 20%. Each Share shall bear its pro-rata share of the Performance Fee, if any, payable in respect of the relevant class. The Performance Fee will be accrued daily and, provided the relevant Shares have not been redeemed, will crystallise and be credited to the Manager once annually on the last Business Day of each calendar year and will be paid to the Manager by the 20th Business Day following the crystallisation date. For newly launched Share classes, any Performance Fee due (otherwise than on redemption of the relevant Shares) will crystallise not earlier than 12 months following closure of the Initial Offer Period for the relevant class on the last Valuation Point for the then current calendar year. Any Performance Fee accrued in respect of Shares redeemed during a Performance Period shall crystallise in due proportions and become payable at the point of redemption. The Performance Fee shall be calculated independently by the Administrator and verified by the Depositary and is not open to the possibility of manipulation.

For the financial period ended 30 September 2022, performance fees of USD Nil (30 September 2021: USD Nil) were charged and USD Nil (31 March 2022: USD Nil) were payable at the financial period end.

#### Lazard European Alternative Fund

The Manager is entitled to receive a performance fee (the "Performance Fee"), accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the Share classes in the Fund (excluding the EA Classes, the M Class and the X Class), equal to 20% of the Net Gain, if any, during the relevant Performance Period. The Manager is also entitled to receive a Performance Fee, accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the EA Classes equal to 10% of the Net Gain, if any, during the relevant Performance Period. No Performance Fee shall be charged to the assets of the M Class and the X Class. A Performance Fee shall accrue and become due and payable in respect of Shares of any relevant class only in the event that both of the conditions below are met:

- the Ending NAV per Share for any Performance Period has exceeded the Hurdle NAV per Share; and
- the Ending NAV per Share for the applicable Performance Period (or as at the date the relevant Shares are redeemed) exceeds the High Water Mark.

#### Lazard Rathmore Alternative Fund

The Manager is entitled to receive a performance fee (the "Performance Fee"), accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the Share classes in the Fund (excluding the EA Classes, the M Classes and the X Class), equal to 20% of the Net Gain, if any, during the relevant Performance Period. The Manager is also entitled to receive a Performance Fee, accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the EA Classes equal to 15% of the Net Gain, if any, during the relevant Performance Period. No Performance Fee shall be charged to the assets of the M Class and the X Class. A Performance Fee shall accrue and become due and payable in respect of Shares of any relevant class only in the event that both of the conditions below are met:

- the Ending NAV per Share for any Performance Period has exceeded the Hurdle NAV per Share; and
- the Ending NAV per Share for the applicable Performance Period (or as at the date the relevant Shares are redeemed) exceeds the High Water Mark.

#### Lazard European Alternative Fund and Lazard Rathmore Alternative Fund

#### **Performance Period**

The first "Performance Period" for each relevant Share class shall commence as of the first Business Day following the closure of the Initial Offer Period for that class and end not earlier than 12 months later on the last Valuation Point of the then current calendar year. Each subsequent Performance Period shall commence immediately on the end of the prior Performance Period and end on the last Valuation Point of the next following calendar year (or otherwise on the date by reference to which the last NAV for the relevant Share class is calculated).

#### Ending NAV per Share

With respect to each class of Shares apart from the Unhedged Share Classes, the Ending NAV per Share is the Net Asset Value per Share of the relevant class as at the Valuation Point immediately prior to the accrual of any applicable Performance Fee.

## **Performance Fees (continued)**

#### Lazard European Alternative Fund and Lazard Rathmore Alternative Fund (continued)

#### Ending NAV per Share (continued)

With respect to each Unhedged Share Class, the Ending NAV per Share is the NAV per Share of the relevant class as described in the preceding paragraph, but expressed in the Fund Base Currency as calculated using the Prevailing Exchange Rate on the relevant date.

#### Hurdle NAV per Share

The Hurdle NAV per Share is calculated by applying the higher of 1.5% or the prevailing 3 month Euribor rate and the prevailing 3 month Euribor rate rate for Lazard European Alternative Fund and Lazard Rathmore Alternative Fund (but see below) respectively (provided such rate is not a negative number and subject to a cap of 5%) as at the date of accrual of the Performance Fee (the "Hurdle Rate") to:

- (i) the opening NAV per Share of the relevant class for the then current Performance Period or, where the relevant class is an Unhedged Share Class, to the opening NAV per Share of the relevant class for the then current Performance Period as expressed in the Fund Base Currency (using the Prevailing Exchange Rate on the relevant date) (the "Opening NAV per Share"), or
- (ii) where the current Performance Period is the first Performance Period for the relevant class, to the Initial Offer Price per Share for the relevant Shares or, where the relevant class is an Unhedged Share Class, to the Initial Offer Price per Share for the relevant Shares as expressed in the Fund Base Currency (using the Prevailing Exchange Rate on the relevant date).

Where the 3 month Euribor rate prevailing at the relevant time is a negative number, the Hurdle NAV per Share shall, as the case may be, be the Opening NAV per Share or the Initial Offer Price per Share for the relevant class (such price being, where the class in question is an Unhedged Share Class, the Initial Offer Price per Share of the relevant class as expressed in the Fund Base Currency (using the Prevailing Exchange Rate on the relevant date).

The Hurdle Rate will be prorated for Performance Periods less than one year.

#### **High Water Mark**

With respect to each class of Shares apart from the Unhedged Share Classes, the High Water Mark is the greater of: (i) the previous highest NAV per Share of the relevant Share class (after deduction of any applicable Performance Fee and any applicable dividend) on the last Valuation Point for any previous Performance Period for which a Performance Fee was paid or accrued; or (ii) the Initial Offer Price per Share of the relevant Share class. With respect to each Unhedged Share Class, the High Water Mark is the greater of (i) or (ii) above each as expressed in the Fund Base Currency using the Prevailing Exchange Rate on the relevant date.

The High Water Mark will be adjusted for any appropriate dividend paid.

A Performance Fee is only ever payable or paid on the increase of the relevant Share classes' Net Asset Value over the relevant High Water Mark or the relevant Hurdle NAV per Share, whichever is higher. Excess performance is calculated net of all costs before any performance fee accrual.

"Prevailing Exchange Rate" means the exchange rate prevailing as between the currency in which the relevant Unhedged Share Class is denominated and the Fund Base Currency.

#### Net Gain

With respect to the Shares of each relevant class, the Net Gain per Share is the difference between the Ending NAV per Share and the higher of (1) the Hurdle NAV per Share and (2) the High Water Mark. "Net Gain" is the Net Gain per Share multiplied by the average number of Shares of the relevant class in issue during the period commencing on the date on which the then current Performance Period began and ending on the accrual date. The average number of Shares may be adjusted to take account of redemptions during the relevant period.

## Performance Fees (continued)

#### Lazard European Alternative Fund and Lazard Rathmore Alternative Fund (continued)

#### General

For each Share class (excluding the EA Classes, the M Classes and the X Class) the Performance Fee will be calculated by taking the Net Gain for the relevant Share class for the applicable Performance Period and multiplying this by the average number of Shares of the relevant class in issue and multiplying the resultant figure by 20% for Lazard European Alternative Fund and Lazard Rathmore Alternative Fund. For each of the EA Classes the Performance Fee will be calculated by taking the Net Gain for the relevant EA Class for the applicable Performance Period and multiplying the resultant figure by 10% and 15% for Lazard European Alternative Fund and Lazard Rathmore Alternative Fund respectively. Each Share shall bear its pro-rata Share of the Performance Fee, if any, payable in respect of the relevant class. The Performance Fee will be accrued daily and, provided the relevant Shares have not been redeemed, will crystallise and be credited to the Manager once annually on the last Business Day of each calendar year and will be paid to the Manager by the 20th Business Day following the crystallisation date. For newly launched Share classes, any Performance Fee due (otherwise than on redemption of the relevant Shares) will crystallise not earlier than 12 months following closure of the Initial Offer Period for the relevant class on the last Valuation Point for the then current calendar year. Any Performance Fee accrued in respect of Shares redeemed during a Performance Period shall crystallise in due proportions and become payable at the point of redemption. The Performance Fee shall be calculated independently by the Administrator and verified by the Depositary and is not open to the possibility of manipulation.

Lazard European Alternative Fund, for the financial period ended 30 September 2022, performance fees of EUR 207,161 (USD 214,557) (30 September 2021: EUR 21,561 (USD 25,696)) were charged and EUR 39,442 (USD 38,639) (31 March 2022: EUR 520,217 (USD 578,820)) were payable at the financial period end.

Lazard Rathmore Alternative Fund, for the financial period ended 30 September 2022, performance fees of USD Nil (30 September 2021: USD 7,022,458) were charged and USD Nil (31 March 2022: USD 15,557) were payable at the financial period end.

#### Lazard Coherence Credit Alternative Fund

The Manager is entitled to receive a performance fee (the "Performance Fee"), accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the Share classes in the Fund (excluding the EA Classes, the M Class, the X Class and the LA Class), equal to 20% of the Net Gain, if any, during the relevant Performance Period. The Manager is also entitled to receive a Performance Fee, accrued daily and payable annually (or otherwise on redemption of the relevant Shares), in respect of each of the EA Classes equal to 10% of the Net Gain, if any, during the relevant Performance Period. No Performance Fee shall be charged to the assets of the M Class and the X Class. A Performance Fee shall accrue and become due and payable in respect of Shares of any relevant class only in the event that the Ending NAV per Share for the applicable Performance Period (or as at the date the relevant Shares are redeemed) exceeds the High Water Mark.

#### **Performance Period**

The first "Performance Period" for each relevant Share class shall commence as of the first Business Day following the closure of the Initial Offer Period for that class and end not earlier than 12 months later on the last Valuation Point of the then current calendar year. Each subsequent Performance Period shall commence immediately on the end of the prior Performance Period and end on the last Valuation Point of the next following calendar year (or otherwise on the date by reference to which the last NAV for the relevant Share class is calculated).

#### Ending NAV per Share

With respect to each class of Shares apart from the Unhedged Share Classes, the Ending NAV per Share is the NAV per Share of the relevant class, prior to the accrual of any applicable Performance Fee and deduction of any applicable dividend, as at the last Valuation Point for the relevant Performance Period (or otherwise on the date by reference to which the price at which the relevant Shares are redeemed is calculated).

With respect to each Unhedged Share Class, the Ending NAV per Share is the NAV per Share of the relevant class as described in the preceding paragraph, but expressed in the Fund Base Currency as calculated using the Prevailing Exchange Rate on the relevant date.

# Notes to the Financial Statements (Unaudited) (continued)

# 3. Fees (continued)

## **Performance Fees (continued)**

#### Lazard Coherence Credit Alternative Fund (continued)

#### **High Water Mark**

With respect to each class of Shares apart from the Unhedged Share Classes, the High Water Mark is the greater of: (i) the highest NAV per Share of the relevant Share class (after deduction of any applicable Performance Fee and any applicable dividend) on the last Valuation Point for any previous Performance Period for which a Performance Fee was payable; or (ii) the Initial Offer Price per Share of the relevant Share class. With respect to each Unhedged Share Class, the High Water Mark is the greater of (i) or (ii) above each as expressed in the Fund Base Currency using the Prevailing Exchange Rate on the relevant date.

The High Water Mark will be adjusted for any appropriate dividend paid.

A Performance Fee is only ever payable or paid on the increase of the relevant Share classes' Net Asset Value over the relevant High Water Mark.

Excess performance is calculated net of all costs before any performance fee accrual.

"Prevailing Exchange Rate" means the exchange rate prevailing as between the currency in which the relevant Unhedged Share Class is denominated and the Fund Base Currency.

#### Net Gain

With respect to the Shares of each relevant class, the Net Gain per Share is the difference between the Ending NAV per Share and the High Water Mark. "Net Gain" is the Net Gain per Share multiplied by the average number of Shares of the relevant class in issue during the period commencing on the date on which the then current Performance Period began and ending on the accrual date. The average number of Shares will be adjusted to take account of redemptions during the relevant period.

#### General

For each Share class of the Fund (excluding the EA Classes, the M Classes, the X Classes and the LA Classes) the Performance Fee will be calculated by taking the Net Gain for the relevant Share class for the applicable Performance Period and multiplying the resultant figure by 20%. For each of the EA Classes the Performance Fee will be calculated by taking the Net Gain for the relevant EA Class for the applicable Performance Period and multiplying the resultant figure by 15%. For each of the LA Classes the Performance Fee will be calculated by taking the Net Gain for the relevant LA Class for the applicable Performance Period and multiplying the resultant figure by 15%. For each of the LA Classes the Performance Fee will be calculated by taking the Net Gain for the relevant LA Class for the applicable Performance Period and multiplying the resultant figure by 10%. Each Share shall bear its pro-rata share of the Performance Fee, if any, payable in respect of the relevant class. The Performance Fee will be accrued daily and, provided the relevant Shares have not been redeemed, will crystallise once annually on the last Business Day of each calendar year will be paid/credited to the Manager 10 Business Days following the crystallisation date. Any Performance Fee accrued in respect of Shares redeemed during a Performance Period shall crystallise in due proportions and become payable at the point of redemption. The Performance Fee shall be calculated independently by the Administrator and verified by the Depositary and is not open to the possibility of manipulation.

Lazard Coherence Credit Alternative Fund, for the financial period ended 30 September 2022, performance fees of USD Nil were charged and Nil (31 March 2022: USD Nil) were payable at the financial period end.

There is no performance fee charged in relation to any of the other Funds.

#### **Reimbursement from Manager**

Each class of Shares of each Fund shall bear its attributable portion of the other expenses of the Company, (as set out in detail under the heading "Other Expenses" in the section of the Prospectus entitled "Fees and Expenses") is subject to an appropriate cap per annum of the NAV of the Fund. The cap for each Fund is disclosed in the table below.

Fund Name	Cap %
Lazard Global Quality Growth Fund	0.30
Lazard Thematic Inflation Opportunities Fund	0.30
Lazard Global Convertibles Investment Grade Fund	0.30
Lazard Global Convertibles Recovery Fund	0.30
Lazard Emerging Markets Bond Fund	0.23
Lazard Emerging Markets Local Debt Fund	0.23

## **Reimbursement from Manager (continued)**

Fund Name	Cap %
Lazard Emerging Markets Total Return Debt Fund	0.23
Lazard Emerging Markets Debt Blend Fund	0.23
Lazard Emerging Markets Debt Unrestricted Blend Fund	0.23
Lazard Emerging Markets Corporate Debt Fund	0.23
Lazard Scandinavian High Quality Bond Fund	0.23
Lazard Commodities Fund	0.15
Lazard Diversified Return Fund	0.25
Lazard European Alternative Fund	0.30
Lazard Rathmore Alternative Fund	0.30
Lazard Coherence Credit Alternative Fund	0.30

As at the 30 September 2022, the above caps on expenses are in effect on Lazard Emerging Markets Bond Fund, Lazard Emerging Markets Debt Blend Fund, Lazard Emerging Markets Corporate Debt Fund, Lazard Diversified Return Fund, Lazard Coherence Credit Alternative Fund and Lazard European Alternative Fund.

The Manager will be responsible for any such expenses in excess of this limit with the exception of the expenses of acquiring and disposing of Investments (including brokerage expenses, custodial and sub-custodial transaction charges, stamp duties and other relevant taxes). For Lazard Diversified Return Fund and Lazard European Alternative Fund, the custodial and sub-custodial transactions charges are included in the cap. For the avoidance of doubt, the Manager will not be responsible for the costs of hedging the currency exposure for the benefit of any particular Share class of the Fund, which costs shall be attributable exclusively to the relevant Share class.

For the financial period ended 30 September 2022, reimbursement from the Manager was USD 600,198 (30 September 2021: USD 203,668) of which USD 49,463 (31 March 2022: USD 76,975) remained receivable at the financial period end.

## Administration, Transfer Agency and Depositary Fees

The Administrator is entitled to an annual administration fee payable by the Funds of up to 0.02% of the Funds' NAV. Such fees shall accrue daily and be payable monthly in arrears. The Administrator shall also be entitled to recover from the Funds its reasonable out-of-pocket expenses.

The Depositary is entitled to an annual depositary fee payable by the Fund of up to 0.0075% of the Funds' NAV. Such fees shall accrue daily and be paid by the Funds monthly in arrears. The Depositary is also entitled to charge the Funds transaction costs, which shall be at normal commercial rates, and to be reimbursed by the Funds for the fees and transactions charges of any sub-custodian (which shall also be at normal commercial rates), together with its reasonable, out-of-pocket expenses.

For the financial period ended 30 September 2022, administration, transfer agency and depositary fees of USD 997,511 (30 September 2021: USD 2,951,626) were charged of which USD 797,758 (31 March 2022: USD 983,915) remained payable at the financial period end.

For twelve months from the date of launch of each Fund, fees payable to State Street for provision of Administration and Depositary services shall be subject to a cap of 23 basis points. Custodial fees related to safekeeping and related transaction costs are excluded from this cap, as are all relevant out of pocket expenses, whether payable to the Depositary, Administrator or other third party.

## **Currency Manager's Fees**

The Funds shall pay State Street Bank Europe Limited (the "Currency Manager") an annual fee, calculated and accrued daily and payable quarterly in arrears, not in excess of 0.05% per annum of the NAV of each hedged Share class in issue, such fee to accrue solely to the hedged Share class in respect of which it is incurred. The foregoing fee is subject to the Currency Manager being entitled to a minimum annual service fee, calculated and accrued daily and payable quarterly in arrears, of USD 75,000 charged pro rata to all relevant hedged Share classes in issue per Fund. For the financial period ended 30 September 2022, Currency Manager's fees of USD 329,671 (30 September 2021: USD 442,336) were charged of which USD 172,583 (31 March 2022: USD 341,562) remained payable at the financial period end.

#### **Directors' Fees**

Directors' fees charged over the financial period were USD 71,005 (30 September 2021: USD 55,134), of which USD 20,926 (31 March 2022: USD 10,579) were outstanding at 30 September 2022.

## 4. Taxation

Under current law and practice, the Company qualifies as an investment undertaking as defined in Section 739B of the Taxes Consolidation Act, 1997, as amended. On that basis the Company will not be liable to taxation in respect of its income and gains, other than on the occurrence of a chargeable event. Generally, a chargeable event arises on any distribution, redemption, repurchase, cancellation, transfer of Shares or on the ending of a 'relevant period', a 'relevant period' being an eight year period beginning with the acquisition of the Shares by the shareholders and each subsequent period of eight years beginning immediately after the preceding relevant period.

A chargeable event does not include:

- a) any transactions in relation to Shares held in a recognised clearing system as designated by order of the Revenue Commissioners of Ireland: or
- b) an exchange of Shares representing a Fund for another Fund: or
- c) an exchange of Shares arising on a qualifying amalgamation or reconstruction of a Fund with another Fund: or
- d) certain exchanges of Shares between spouses and former spouses.

A chargeable event will not occur in respect of shareholders who are neither resident nor ordinarily resident in Ireland and who have provided the Company with a relevant declaration to that effect.

In the absence of an appropriate declaration, the Company will be liable to Irish Tax on the occurrence of a chargeable event. There were no chargeable events during the period under review.

Capital gains, dividends and interest received may be subject to withholding taxes imposed by the country of origin and such taxes may not be recoverable by a Fund or its shareholders.

## Withholding Tax Refunds

During the financial period ended 30 September 2022 and financial year ended 31 March 2022, a number of Funds received withholding tax refunds which were not previously recognised due to uncertainty around their recoverability. Upon receipt of these refunds, these amounts are included in the Net Asset Value of the Funds and are recorded in the Statement of Comprehensive Income. These refunds would generally have a positive impact on the performance of the relevant Funds which received them.

# 5. Capital and Reserves

The Company has a variable share capital.

## **Management Shares**

The authorised share capital of the Company is two subscriber shares of par value of  $\pounds 1.00$  each. The two subscriber shares are held by the Manager and the Promoter. The subscriber Shares do not form part of the NAV of the Company.

## **Redeemable Participating Shares**

The Company also has an authorised share capital of 5,000,000,000,000 Shares of no par value which are available for issue as fully paid participating shares in each of the Company's Funds ("Redeemable Participating Shares"). They may be redeemed by the Company at the request of the shareholder. The value of Shares issued and redeemed during the financial period is set out in the Statement of Changes in Net Assets Attributable to Redeemable Participating Shareholders. Each Fund issues Redeemable Participating Shares, which are redeemable at the holder's option and are classified as financial liabilities. Redeemable Participating Shares can be put back to the Fund at any time for cash equal to a proportionate share of the Fund's NAV. The Redeemable Participating Share is carried at the redemption amount that is payable at the Statement of Financial Position date if the holder exercises the right to put the Share back to the Fund.

## **Redeemable Participating Shares (continued)**

The activity on Redeemable Participating Shares for the financial period ended 30 September 2022, the financial year ended 31 March 2022 and the financial period ended 30 September 2021 is as follows:

\* Lazard Thematic Inflation Opportunities Fund launched on 21 June 2022, therefore there are no comparatives for this Fund.

See Note 16 for information on the launch and termination dates of the above Share classes.

# 6. Net Asset Value

The NAV per share of any class of Shares in a portfolio is determined by dividing the value of net assets of the Fund by the total number of Redeemable Participating Shares in issue at 30 September 2022, 31 March 2022 and 30 September 2021. The information disclosed in the following tables for all of the Lazard Funds as at 30 September 2022, 31 March 2022 and 30 September 2021 is in line with the information as calculated in accordance with the Prospectus (published NAV). The NAV and NAV per share in the following tables are stated in the currency of the relevant class.

Effective 13 May 2021, swing pricing was implemented on the Funds, replacing the previous Anti-Dilution Levy mechanism. As at 30 September 2022 no swing pricing was applied to the NAVs valuation.

Shares are issued and redeemed at a single price, being the Net Asset Value per Share of the relevant class, which may be adjusted as described below.

Certain costs are customarily incurred when a Fund has to buy or sell portfolio assets in order to satisfy or give effect to requests for subscription or redemption of its Shares. The incurring of such dealing costs by a Fund can result in a Fund's value being diminished or 'diluted' over time and can therefore have a disadvantageous effect on Shareholders' interests in a Fund if counteracting steps are not taken. With a view to offsetting the effects of dilution to the extent deemed appropriate in the interests of Shareholders, the Directors may determine at their discretion, to adjust ("swing") the Net Asset Value per Share when calculating the Share Price on any particular Dealing Day.

## 6. Net Asset Value (continued)

Swing pricing, where applied, aims to ensure that the burden of the costs associated with dealing in a Fund's Shares are borne by the investors that actually request those Share deals on a particular Dealing Day, and not by the Shareholders in a Fund who are not trading in the Shares on the relevant Dealing Day. In this way swing pricing aims to mitigate the adverse effects of dilution on Fund assets and to preserve and protect the value of shareholdings.

### 8. Cash and Cash Equivalents

Cash at bank, bank overdrafts (if any) and cash equivalents as at 30 September 2022 and 31 March 2022 comprises cash at bank. The Depositary may utilise one or more sub-custodians for holding cash of the Funds. Substantially all of the cash at bank is held with the Depositary's global sub-custodian, State Street Bank and Trust Company ("State Street"). Cash collateral deposited on behalf of the Funds for financial derivative instruments is held with Bank of America Merrill Lynch, Barclays Bank Plc, CIBC World Markets, Citibank NA, JP Morgan Chase and Company, Morgan Stanley, Standard Chartered Bank and UBS AG and is subject to the counterparty risk of those entities. Cash is also deposited by or on behalf of the Funds for initial margin purposes with brokers for options, open futures contracts, contracts for difference and total return swaps, this cash is held with Bank of America Merrill Lynch, BNP Paribas, CIBC World Markets, Goldman Sachs, JP Morgan Chase and Company, Morgan Stanley, Norgan Stanley, Nomura, Societe Generale and UBS AG at the financial period end. (See Note 10, Counterparty/Issuer Risk and Credit Risk).

Cash collateral may also be received by the Funds in respect of financial derivative instruments held by the Funds at respective period/ year end. Such cash is held with State Street and recognised as a liability on the relevant Fund's Statement of Financial Position. Margin cash may also be payable by Funds to brokers at the respective period/year end and is reported as a liability on the relevant Fund's Statement of Financial Position.

Cash account arrangements are in place in respect of the Company and the Funds as a consequence of the requirements relating to the subscription and redemption collection accounts pursuant to the Central Bank of Ireland (Supervision and Enforcement) Act 2013 (Section 48 (i)) Investor Money Regulations 2015 for Fund Service Providers (the 'Investor Money Regulations').

These cash accounts, held with Bank of America for collection of subscriptions, payment of redemptions and dividends for the Company are deemed assets of the Company and are included in the Statement of Financial Position.

### 9. Efficient Portfolio Management

The Company may, on behalf of any Fund and subject to the regulations and conditions imposed by the Central Bank, employ techniques and instruments relating to transferable securities and money market instruments, including investment in financial derivative instruments (FDIs). Such techniques and instruments may be used for efficient portfolio management purposes, or for hedging purposes or for direct investment purposes, where applicable. Such techniques and instruments may include investments in exchange-traded or over-the-counter FDIs, such as futures, forwards, options, swaps, credit-default swap indices, swaptions, credit linked notes, convertible securities and warrants.

Efficient portfolio management means instruments and investment techniques involving transactions that are entered into for one or more of the following specific aims: the reduction of risk, the reduction of cost, or the generation of additional capital or income for a Fund. New techniques and instruments may be developed which may be suitable for use by the Company and the Company may (subject to the conditions imposed the Central Bank) employ such techniques and instruments subject to the Supplement for the relevant Fund being updated and Shareholders being notified in advance. Where the Company intends to use these instruments for direct investment purposes, full details will be disclosed in the relevant Fund's investment policy. Where a Fund intends to engage in transactions involving FDI under any circumstances, the Company shall employ a risk management process in accordance with Central Bank requirements to enable it to monitor, measure and manage, on a continuous basis, the risk to all open derivative positions and their contribution to the overall risk profile of the Fund. Only such FDIs as are provided for in the current risk management process for the Company approved by the Central Bank may be used by the Company.

### 9. Efficient Portfolio Management (continued)

The Company did not engage in any efficient portfolio management techniques during the financial period ended 30 September 2022, financial year ended 31 March 2022 or financial period 30 September 2021.

### **10. Risk Management Policies and Procedures**

The Funds' investment activities expose them to the various types of risk which are associated with the financial instruments and markets in which they invest. The following information is not intended to be a comprehensive summary of all risks and investors should refer to the Prospectus and Supplements for a more detailed discussion of the risks inherent in investing in the Funds.

The Directors review reports from the Investment Managers on a quarterly basis and more frequently as required in relation to the Funds' performance and risk profile. The Investment Managers are also responsible for ensuring that the Funds are managed within the terms of the Funds' investment guidelines and limits set out in the Prospectus' and Supplements as well as the Investment Managers' own internal investment guidelines and limits. The Directors delegate to the Manager who in turn delegates to the Investment Managers responsibility for the monitoring and managing of risk for the Funds.

There is a Risk Management Team responsible for overseeing the risk management process of the Investment Managers. Risk Management is delegated to the respective risk team in either the country of operation of the relevant Investment Manager or where not available, Lazard Asset Management LLC. The Manager's Group Head of Risk reports into the Oversight Committee. The Oversight Committee is the central management body for the Investment Managers' investment platform. It reviews and monitors all Funds to ensure that they remain consistent with their stated goals and objectives in terms of product characteristics, performance and risk, meaning that the Funds are managed in line with client expectations and their legal and constitutional regulations.

The following paragraphs outline procedures undertaken to manage the market, credit and liquidity risks of the Funds. These are consistent with the risks that existed at 31 March 2022.

#### **Market Risk**

Market risk arises mainly from uncertainty about future values of financial instruments held specifically from price, currency and interest rate movements. It represents the potential loss the Funds might suffer through holding market positions in the face of market movements.

The global exposure will be calculated using an advanced risk measurement approach. The investment management team use valueat-risk ("VaR") and commitment approach as an integral part of their ongoing monitoring and management of the Funds' market risk. For Lazard Global Convertibles Recovery Fund, Lazard Scandinavian High Quality Bond Fund and Lazard Commodities Fund, the Company uses the commitment approach to measure global exposure. VaR is used for monitoring the risk for the remaining Funds.

Each Fund's global exposure will be calculated daily by way of an absolute VaR model using the Bloomberg Alpha Portfolio Analytics and Risk application. Bloomberg Alpha is used for all the required calculations and reporting for VaR. VaR is a category of risk measures which, unlike market risk metrics such as the Greeks, duration and convexity, can be applied to all asset types and can cover all sources of market risk. VaR summarises the maximum expected loss over a target horizon with a given level of confidence. VaR is a useful measure in that it can summarise the maximum loss in a single monetary value or a percentage of the overall portfolio. The Investment Managers will also be using Algorithmics system for VaR calculations and risk analyses. Analytics from Algorithmics are also used in Bloomberg Alpha. The VaR model will use the following quantitative standards:

- The confidence level should be 99%;
- The holding period should be 1 trading day; and
- The historical observation period should not be less than 1 year; however, a shorter observation period may be used if justified, for example, as a result of significant recent changes in price volatility.

There are three popular approaches for calculating VaR, namely Historical Simulation, analytical Variance-Covariance method and Monte Carlo Simulation. The investment management team uses the simple yet powerful approach of the historical simulation method which assumes that historical return distribution is a good representation of future returns. The Investment Managers believe that this method is one of the more reliable methods as it requires making the minimum number of assumptions. It also incorporates the volatilities and correlations explicitly by using the real market returns. As the VaR reports generated by Bloomberg Alpha are based on 99% confidence interval and 1 day holding period, the 20% 20-day limit is scaled down according to appropriate factors. The absolute 1-day 99% VaR limit is 20% / sqrt(20) = 4.47%.

#### Market Risk (continued)

In case the VaR for certain holdings does not get calculated by the system due to data errors or modelling limitation, the Risk Management Team will assess the VaR impact of those holdings and incorporate that figure as an add-on to the VaR. This approach may ignore possible diversification benefits, and will provide a conservative VaR level for the portfolio.

Stress testing will be performed on a monthly and as required basis. Back testing results will be recorded daily and analysed monthly. The data in the VaR model is updated on a daily basis and contains one year's market data.

Bloomberg Alpha is used for stress testing to evaluate the market risk inherent in the portfolio under abnormal market conditions. The risk methodology used in stress tests is similar to the one used in calculating VaR. The portfolio Profit and Loss (P&L) or % return is generated by calculating a projected portfolio market value, based on a change in Risk Factors. To generate the market value, a "Full Valuation Methodology" is used to theoretically value every security within the Fund or the sensitivities to rates and spreads are used to assess the impact of larger market moves.

Since VaR cannot incorporate all possible scenarios, stress testing helps capture sudden and dramatic changes in the portfolio's value given atypical market circumstances. Stress testing is utilised monthly and on an ad hoc basis. Daily monitoring of the sensitivities to interest rates, FX and credit spreads gives a better picture of how the portfolio might react to sudden market moves.

Some limitations of VaR are:

- the models are based on historical data and cannot take account of the fact that future market price movements, correlations between markets and levels of market liquidity in conditions of market stress may bear no relation to historical patterns;
- the market price risk information is a relative estimate of risk rather than a precise and accurate number;
- the market price information represents a hypothetical outcome and is not intended to be predictive (in the case of probabilitybased methods, such as VaR, profits and losses are almost certain to exceed the reported amount with a frequency depending on the confidence interval chosen); and
- future market conditions could vary significantly from those experienced in the past.

#### (i) Market Price Risk

Market price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting similar financial instruments traded in the market. The Funds are exposed to market price risk arising from their investments in securities. By diversifying the portfolio, the risk that a price change of a particular investment will have a material impact on the Funds is minimised. The Investment Managers and the Manager's Head of Investment Risk manage the Funds' market risk on a daily basis in accordance with the respective Fund's investment objective, policies and core philosophy. The core philosophy of total performance measurement entails the active management of return, risk and cost. Relative-to-benchmark risk is controlled through the construction of diversified portfolios where exposures to certain market features (such as capitalisation or industry) are limited. As at 30 September 2022 and 31 March 2022 all of the securities (excluding derivatives) were designated at fair value through profit or loss.

Refer to the Portfolio of Investments for details of the fair value of the securities held on each Fund.

#### (ii) Foreign Currency Risk

The Funds may invest in securities denominated in currencies other than its functional currency (or, indeed, the currency of the investor). Furthermore, the Funds may invest in forward foreign currency exchange contracts for the purpose of implementing investment views as well as hedging. Consequently, the Funds are exposed to risks that the exchange rate of its reporting currency relative to other currencies may change in a manner that has an adverse effect on the value of the portion of a Fund's assets that are denominated in currencies other than its own currency. Currencies may also move in such a way as to cause losses on currency forward foreign currency exchange contracts.

For the Funds in which currency risk is hedged out, the currency risk is managed by regular rebalancing of the forward foreign currency exchange contracts to maintain zero (or close to zero) currency exposure. For those Funds for which currency exposure is a critical source of return, exposures are managed relative to the appropriate benchmark. For other Funds, there is no explicit currency-management policy.

#### Market Risk (continued)

#### (iii) Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in prevailing interest rates. The Funds are exposed to interest rate risk through investments in securities with fixed and floating rates of interest, held within the Funds and their respective cash balances. The Investment Managers manage the Funds' interest rate risk on a daily basis in accordance with the respective Fund's investment objective, policies and core philosophy.

#### **Credit Risk**

Credit risk is the risk that the counterparty or issuer to a financial instrument will fail to discharge an obligation or commitment that it has entered into with a Fund. The Funds' main credit risk concentrations arise from trading equity and debt securities, investment funds and financial derivative instruments ("FDIs") in addition to cash balances held at the Depositary. Refer to the Portfolio of Investments on pages 104 to 172 for details of the monetary values relating to the above.

All transactions involving transferable securities are settled upon delivery using approved brokers. The risk of default is considered minimal, as delivery of securities sold is only made once the broker has received payment. Payment is made on a purchase once the securities have been received by the broker. The trade will fail if either party fails to meet their obligations.

Substantially all of the cash and securities held by the Funds are held via the Depositary except for the FDI that are held with counterparties as disclosed on the Portfolio of Investments. State Street act as the Global Sub-Custodian for the Depositary.

While cash held by State Street and the Depositary is identifiable as belonging to the Funds, the Funds will be exposed to the credit risk of the financial institution where cash is deposited. In the event of insolvency of the financial institution, the Funds will be treated as a general creditor of the financial institution in relation to cash holdings of the Funds.

In circumstances such as the insolvency of a sub-custodian or registrar, or retro-active application of legislation, the Funds may not, in all cases, be able to establish title to investments made and may suffer losses as a result. The Funds may find it impossible to enforce their rights against third parties. In addition, as the Funds may invest in markets where custodial and/or settlement systems are not fully developed, there is a transaction and custody risk involved in dealing in such markets. In certain circumstances, a Fund may not be able to recover some of its assets. Such circumstances may include any acts or omissions or the liquidation, bankruptcy or insolvency of a sub-custodian, retroactive application of legislation and fraud or improper registration of title. The costs borne by a Fund in investing and holding investments in such markets will generally be higher than in organised securities markets.

The Funds' securities are always separately identified on the accounting records of State Street, therefore the rights, with respect to those securities, are preserved. Thus in the event of insolvency or bankruptcy of the Depositary, the Funds' assets are segregated and protected and this further reduces counterparty risk.

Bankruptcy or insolvency by the Depositary may cause the Funds' rights with respect to the cash and the securities held by the Depositary to be delayed or limited. The Funds monitor their risk by monitoring the credit quality and financial position of the Depositary that the Funds use. The long term credit rating of the parent company of the Depositary and Global Sub-Custodian, State Street Corporation, is A1 (31 March 2022: A1) based on the Moody's Rating Agency. The Depositary has a general lien in the normal course of business over the assets of the Funds.

The extent of the Funds' exposure to credit risk in respect of the financial statements approximates the carrying value as recorded in the Statement of Financial Position. There were no past due or impaired assets as of 30 September 2022 and 31 March 2022.

#### **Counterparty/Issuer Risk**

The Funds are exposed to a credit risk to parties with whom they trade and will bear the risk of settlement default. Counterparty/issuer risk is monitored and managed by a formal counterparty or issuer exposure management program within the Investment Managers. The Investment Managers' approved list of counterparties is generally limited to the most highly rated and recognised dealers in their sectors. The Investment Managers perform ongoing monitoring of this list. Counterparty/issuer risk is monitored on an ongoing basis in the following manner:

• Approved broker selection - the trading system only permits trading with approved brokers. New brokers are added, subject to a formal review process that includes a review of the broker's creditworthiness, financial strength, ability to enter into legally enforceable arrangements and standing in the financial community.

#### Counterparty/Issuer Risk (continued)

- Broker monitoring performed through a variety of ongoing activities, including the assessment of certain regulatory filings and financial statements.
- Measurement and monitoring of counterparty or issuer trade exposure a daily review of outstanding positions is performed.

A Fund is exposed to a credit risk on the over the counter ("OTC") counterparties with whom it trades, that these counterparties may not perform their obligations and that settlement of transactions may not occur. All OTC counterparties must meet the following criteria as set out in the UCITS Regulations namely:

- (i) A credit institution in accordance with Central Bank UCITS Regulations; or
- (ii) Have a minimum credit rating of A2 or equivalent, or in the opinion of the Investment Managers, an implied credit minimum rating of A2 or equivalent.

Exposures to individual counterparties are limited to 10% of NAV in the case of (i) above and 5% of NAV in the case of (ii) above.

Cash collateral is held with Bank of America Merrill Lynch, Barclays Bank Plc, CIBC World Markets, Citibank NA, JP Morgan Chase and Company, Morgan Stanley, Standard Chartered Bank and UBS AG. Counterparty cash received by a Fund as collateral for financial derivative instrument transactions is recorded as an asset on the Statement of Financial Position within "Broker cash held as collateral for financial derivative instruments" and a related liability to repay the collateral is disclosed within "Broker cash due to counterparties for financial derivative instruments". A Fund's assets may be deposited by or on behalf of a Fund for collateral purposes with counterparties for financial derivative instruments held on the Fund. Such assets remain in the ownership of the relevant Fund and are recorded as an asset on the Statement of Financial Position. Cash pledged by a Fund as collateral is recognised on the Statement of Financial Position within "Broker cash held as collateral for financial Position within "Broker cash held as collateral for financial derivative instruments for financial derivative instruments held on the Fund. Such assets remain in the ownership of the relevant Fund and are recorded as an asset on the Statement of Financial Position. Cash pledged by a Fund as collateral is recognised on the Statement of Financial Position within "Broker cash held as collateral for financial derivative instruments for reference purposes only (please refer to the Portfolio of Investments for Lazard European Alternative Fund, Lazard Rathmore Alternative Fund and Lazard Coherence Credit Alternative Fund respectively).

Cash is also deposited by or on behalf of the Funds for initial margin purposes with brokers for options, open futures contracts, contracts for difference and total return swaps, this cash is held with Bank of America Merrill Lynch, BNP Paribas, CIBC World Markets, Goldman Sachs, JP Morgan Chase and Company, Morgan Stanley, Nomura, Societe Generale and UBS AG at the financial period end and is subject to the credit risk of the relevant broker.

#### **Liquidity Risk**

The Funds' assets comprise mainly realisable securities which can be readily sold. Please note that the Funds abide by the ESMA liquidity guidelines. Certain securities held by a Fund may be difficult (or impossible) to sell at the time and at the price the relevant Investment Manager would like. A Fund may have to hold these securities longer than it would like and may forego other investment opportunities. There is the possibility that a Fund may lose money or be prevented from earning capital gains if it cannot sell a security at the time and price that is most beneficial to that Fund. Funds that invest in certain small company securities, high-yield bonds, mortgage-backed securities or foreign or emerging market securities, which have all experienced periods of illiquidity, maybe subject to liquidity risks.

The main liability of the Funds is the redemption of any Shares that investors wish to sell. Shareholders have the right to require the Funds to redeem their Shares in the Funds on any business day subject to restrictions set out in the Prospectus. If total requests for redemption and/or switching on any dealing day for any Fund exceed 10% of the NAV of that Fund, each redemption or switching request in respect of Shares in such Fund may, at the discretion of the Directors, be reduced pro rata so that the total number of Shares of such Fund for redemption or switching on that dealing day shall not exceed 10% of the NAV of that Fund. Any redemption or switching requests so reduced shall be carried forward to the next dealing day and effected to subsequent redemption or switching requests on the following dealing day(s). No redemption requests were reduced pro-rata in the year (and in the preceding year). The Funds have the ability to borrow in the short term to ensure settlement. No such borrowings have arisen during the financial period ended 30 September 2022 or during the financial year ended 31 March 2022.

The Funds' financial liabilities due for payment within one month relate in the most part, to security purchases awaiting settlements, redemptions of Redeemable Participating Shares and payment of expenses and bank overdraft interest. Details of these amounts where relevant, can be found in the Statement of Financial Position. There are no financial liabilities that fall due over 3 months except for the FDIs whose maturity dates are outlined on the Portfolios of Investments at 30 September 2022 or at 31 March 2022.

#### **Concentration Risk**

The Funds may be exposed to concentration risk when a shareholder holds a significant portion of the issued share capital of the Funds as disclosed in Note 13.

#### **Fair Value Measurement**

The Company is required to classify financial assets and financial liabilities at fair value through profit or loss as follows:

Level 1 inputs are unadjusted quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the valuation date. An active market for the asset or liability is a market in which transactions for the asset or liability occur with sufficient frequency and volume to provide pricing information on an ongoing basis.

Level 2 inputs are inputs other than quoted prices in active markets included within level 1 that are observable for the asset or liability, either directly or indirectly. Fair value is determined through the use of models or other valuation methodologies. Level 2 inputs include the following:

- a) Quoted prices for similar assets or liabilities in active markets.
- b) Quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current, or price quotations vary substantially either over time or among market makers, or in which little information is released publicly.
- c) Inputs other than quoted prices that are observable for the asset or liability (e.g. interest rate and yield curves observable at commonly quoted intervals, volatilities, prepayment speeds, loss severities, credit risks and default rates).
- d) Inputs that are derived principally from or corroborated by observable market data by correlation or other means.

Level 3 inputs are unobservable inputs for the asset or liability. Unobservable inputs reflect the Company's own assumptions about how market participants would be expected to value the asset or liability. Unobservable inputs are developed based on the best information available in the circumstances, other than market data obtained from sources independent of the Company and might include the Company's own data.

An investment is always categorised as level 1, 2 or 3 in its entirety. In certain cases, the fair value measurement for an investment may use a number of different inputs that fall into different levels of the fair value hierarchy. In such cases, an investment's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. The assessment of the significance of a particular input to the fair value measurement requires judgment and is specific to the investment.

The following tables provide a breakdown of the financial instruments of each Fund by valuation category at 30 September 2022 and 31 March 2022:

These securities are corporate bonds incorporated in the Cayman Islands, G3 Exploration Ltd. and were priced using unobservable inputs. The fair value of these Level 3 securities at 30 September 2022 and 31 March 2022 was USD Nil.

There were Level 3 securities held on Lazard Rathmore Alternative Fund as at 30 September 2022 and 31 March 2022. The fair value of Level 3 securities as at 30 September 2022 was USD 576,762 for convertible bond incorporated in the Canada - Dye & Durham Ltd and USD Nil for warrants incorporated in United States - Benson Hill Inc and Esperion Therapeutics Inc. The fair value of Level 3 securities at 31 March 2022 was USD 924,588 for common stock incorporated in the United States, Benson Hill Inc and USD Nil for warrants incorporated in United States, Benson Hill Inc and Esperion Therapeutics Inc. All of these Level 3 securities were priced using unobservable inputs.

There was a Level 3 security held on Lazard Diversified Return Fund at 31 March 2022. This security was common stock incorporated in the South Korea, Osstem Implant Company Ltd. and was priced using unobservable inputs. The fair value of this Level 3 security at 31 March 2022 was USD 5,563.

### 11. Credit Facility

On 27 October 2020, the Company entered into an unsecured credit facility ("Line of Credit") with State Street, to be utilised on a temporary basis for short-term liquidity purposes. The maximum amount of the Line of Credit available is USD 25,000,000 and the amount utilised by any Fund may not exceed 10% of that Fund's adjusted net assets. Each Fund will pay a commitment fee at the rate of 0.20% per annum on its pro-rata portion of the Line of Credit, which will be reflected as an expense in the Statement of Comprehensive Income. Interest on borrowings is charged at the applicable rate for the respective interest period plus a margin. There were no amounts drawn down from the Line of Credit during the financial period ended 30 September 2022 and year ended 31 March 2022.

The Line of Credit was renewed in August 2022.

### 12. Soft Commission Arrangements

In relation to Lazard Diversified Return Fund and Lazard European Alternative Fund, the Investment Managers, in accordance with common market practice for investment managers, entered into dealing arrangements with brokers whereby part of the dealing commissions paid to them is used to discharge the cost of investment related services supplied to them by the broker or by third parties. These services may be either market research or be related to the execution of trades on behalf of clients.

The Investment Managers places business with these counterparties including transactions relating to the investments of Lazard Diversified Return Fund and Lazard European Alternative Fund. The Investment Managers will endeavour at all times to obtain best execution on all transactions for all clients including these Funds, and is satisfied that these arrangements are of benefit to these Funds. For the other Funds, there were no soft commission arrangements during the financial period ended 30 September 2022 or during the financial year ended 31 March 2022.

### **13. Related Party Transactions**

The authorised share capital of the Company is two subscriber shares of par value of  $\pounds$ 1.00 each. The two subscriber shares are held by the Manager and the Promoter. All material related party transactions with the Manager and Directors are included in Note 3 to the financial statements.

### 13. Related Party Transactions (continued)

Andreas Hübner, Jeremy Taylor and Denis Faller are full time executives of the Lazard group as well as Directors of the Company. Andreas Hübner, Jeremy Taylor and Denis Faller are not entitled to any Directors' fees. These current Company's Directors are also Directors of the Manager. Directors' fees charged over the financial period were USD 71,005 (30 September 2021: USD 55,134), of which USD 2,657 (31 March 2022: USD 10,579) were outstanding at 30 September 2022.

Daniel Morrissey is a Director of the Company and was a partner of William Fry until 1 January 2022 (the Company's legal advisers as to Irish Law and who also provide Global Foreign Registration Services to the Company). The partners of William Fry own Wilton Secretarial Limited (the "Secretary"). Accordingly, Daniel Morrissey had a beneficial interest under the Irish Companies Act 2014 in legal and secretarial fees paid to William Fry and the Secretary and amounts of USD 423,179 were paid for the financial period ended 30 September 2022 (30 September 2021: USD 230,376).

#### **Connected Person Transactions**

In accordance with the requirements of the Central Bank UCITS Regulations 43(1), any transaction carried out with the Company by its management company or depositary, and the delegates or sub-delegates of such a management company or depositary (excluding any non-group company sub-custodians appointed by a depositary), and any associated or group company of such a management company, depositary, delegate or sub-delegate ("connected persons") must be carried out as if negotiated at arm's length. Such transactions must be in the best interests of the shareholders. In addition to those transactions, there are also transactions carried out by connected persons on behalf of the Company to which the Directors have no direct access and in respect of which the Directors must rely upon assurances from its delegates that the connected persons carrying out those transactions do carry them out on a similar basis. Shareholders should have regard to the governance structure of the Company as more particularly described in the Corporate Governance Statement section of the Directors' Report of the audited financial statements for the financial year ended 31 March 2022 and the roles and responsibilities of the Company's respective delegates subject to the overall supervision of the Board. Further, shareholders should refer to the Prospectus which identifies many of the connected person transactions and the general nature of the contractual arrangements with the principal connected persons but it is not exhaustive of all connected person transactions.

Shareholders should also refer to the provisions of the Prospectus dealing with conflicts of interest. Therefore, having regard to confirmations from the Company's management and its relevant delegates, the Directors of the Company are satisfied that:

- (i) there are arrangements (as evidenced by written procedures documented by the Manager in place to ensure that the obligations described above are applied to all transactions with connected persons; and
- (ii) transactions with connected persons entered into during the financial period complied with these obligations, as attested by the Manager through regular updates to the Directors.

Details of fees paid to related parties and certain connected persons are set above and out in Note 3 to the financial statements. However, shareholders should understand that not all "connected persons" are related parties as such latter expression is defined by Section 33 of FRS 102.

### 14. Cross-Investments

As at 30 September 2022, Lazard Diversified Return Fund holds 724 shares in M Acc USD Class of Lazard Commodities Fund (31 March 2022: 1,172 shares), it holds 680 shares in M Acc USD Hedged Class of Lazard European Alternative Fund (31 March 2022: 680 shares) and it holds 729 shares in M Acc USD Class of Lazard Rathmore Alternative Fund (31 March 2022: 729 shares).

As a result of the cross investment there were no fees charged to the assets attributable to these classes.

### 14. Cross-Investments (continued)

The impact of the below cross-investment transactions has been eliminated from the total column for the Company in the Statement of Comprehensive Income, Statement of Financial Position and Statement of Changes in Net Assets Attributable to Redeemable Participating Shareholders.

Issues and redemptions of Shares and the related realised gains and losses for the financial period ended 30 September 2022:

30 September 2022	Lazard Commodities Fund USD	Lazard European Alternative Fund USD	Lazard Rathmore Alternative Fund USD

	EA Dist GBP	03 August 2022
	C Acc GBP	14 September 2022
Lazard Emerging Markets Corporate Debt Fund	A Dist GBP Hedged	25 August 2022

During the financial period ended 30 September 2022, the following share classes were relaunched:

Fund Name	Share Class	Relaunch Date
Lazard European Alternative Fund	C Acc CHF Hedged	10 June 2022
	C Acc GBP Hedged	15 August 2022

During the financial period ended 30 September 2022, the following share classes were fully redeemed.

Fund Name	Share Class	Termination Date
Lazard Emerging Markets Total Return Debt Fund	M Dist AUD Hedged	28 April 2022
Lazard European Alternative Fund	C Acc USD	17 August 2022
Lazard Diversified Return Fund	AP Acc USD	29 September 2022

Effective 1 April 2022, MacFarlanes LLP ceased as the legal advisors of the Company and CMS Cameron McKenna Nabarro Olswang LLP was appointed as the new legal advisor as the new legal advisors on the same date.

### 16. Significant Events During The Financial Period (continued)

Effective 5 April 2022, the Company's Supplements for Lazard Emerging Markets Total Return Debt Fund, Lazard European Alternative Fund and Lazard Rathmore Alternative Fund were amended to reflect changes of performance fee crystallization.

Samantha McConnell was appointed to the Audit Committee on 14 June 2022.

Lazard Thematic Inflation Opportunities Fund launched on 21 June 2022.

Effective 4 August 2022, the Company's Supplements for Lazard Commodities Fund was amended to include additional details regarding The Initial Offer Period.

Gavin Caldwell resigned as a Director of the Company and also resigned from the Audit Committee effective 30 September 2022.

#### **Potential Implication of Covid-19**

The coronavirus disease 2019 (COVID-19) global pandemic and the aggressive responses taken by many governments or voluntarily imposed by private parties, including closing borders, restricting travel and imposing prolonged quarantines or similar restrictions, as well as the closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may be expected to impact a Portfolio and its investments.

#### Crisis in Ukraine and effect on the Funds

On 24 February 2022, Russian troops launched an invasion of Ukraine and, as at 30 September 2022, the countries remain in active armed conflict. As a result of the invasion, the United States, the United Kingdom, the European Union, and several other nations announced a broad array of new or expanded sanctions, export controls, and other measures against Russia, as well as upon certain banks, companies, government officials, and other individuals in or affiliated with Russia and Belarus.

The ongoing conflict and the rapidly evolving response measures has had a negative impact on the economy and business activity globally (including in the countries in which the Funds invest), and therefore could adversely affect the performance of the Funds' investments. The severity and duration of the conflict and its impact on global economic and market conditions are impossible to predict, and as a result, management is actively monitoring the situation and the impact it may have on the Funds. There is also a potential impact with respect to inflation and also a potential supply chain disruption to the underlying companies invested in.

As at 30 September 2022, none of the Funds held Russian debt securities. As at 31 March 2022, a number of Emerging Markets Funds held Russian debt securities and these securities were less than 1% on each applicable Fund.

For certain Funds, the market in which the Funds' investments were exposed to experienced significant volatility during the financial period. The absolute and relative performance numbers are included in the Investment Management Commentaries within these Financial Statements.

There were no other significant events during the financial period.

### 17. Significant Events Since The Financial Period End

Distributions will not be paid in respect of any class of Share which is an accumulating class. Income and profits, if any, attributable to an accumulating Share class will be accumulated and reinvested in the relevant Fund on behalf of the Shareholders of that class and will be reflected in the NAV of the relevant accumulating Share class. Distributions were declared on the below share classes in respect of the period from 1 April 2022 to 30 September 2022. These were paid to the Shareholders of that class in the relevant Fund on 10 and 11 October 2022 and details of these distributions are as follows:

Ms Deirdre Gormley was appointed as a Director of the Company and a Director of the Manager effective 7 November 2022.

Lazard Nordic High Yield Bond Fund has been approved by the Central Bank on 29 August 2022 and launched on 1 November 2022.

The Lazard Emerging Bond Fund was fully redeemed on 16 November 2022.

There were no other significant events since the financial period end.

### **18. Reconciliation Of Financial Statements NAV To Published NAV**

All fees and expenses of establishing Lazard Thematic Inflation Opportunities Fund, Lazard Global Quality Growth Fund, Lazard Coherence Credit Alternative Fund and Lazard Commodities Fund at 30 September 2022 and Lazard Global Convertibles Investment Grade Fund, Lazard Global Quality Growth Fund, Lazard Coherence Credit Alternative Fund and Lazard Commodities Fund at 31 March 2022 are borne by the Fund. These include fees to the Fund's professional advisors and will not exceed USD 100,000 per sub fund and are amortised over the first 60 months of the lifetime of the Funds. However, for the purpose of these financial statements, the organisational fees have been expensed to the Fund in their entirety in line with FRS 102. Due to the difference in the treatment of these fees, there is a difference in the NAV per the financial statements and the NAV as calculated in accordance with the Prospectus (published NAV).

As at 30 September 2022, the NAV for Lazard Rathmore Alternative Fund per the financial statements was inclusive of redemptions of USD 17,961,456 which were posted to the Fund after the last published NAV had been finalised. As at 31 March 2022, the NAV for Lazard Commodities Fund per the financial statements was inclusive of redemptions of USD 919,301 which were posted to the Fund after the last published NAV had been finalised. The table below reconciles the movement from the NAV per the financial statements to the published NAV taking into account the aforementioned adjustments.

The NAV per the financial statements for all of the other Funds as at 30 September 2022 and 31 March 2022 are in line with the NAV as calculated in accordance with the Prospectus (published NAV).

# Statements of Major Changes in Investments (Unaudited)

In accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, a statement of largest changes in the composition of the Portfolios of Investments during the reporting period is provided to ensure that shareholders can identify changes in the investments held by the Funds. These are defined as the aggregate purchases and sales of an investment (including maturities but excluding repurchase agreements, overnight discount notes and time deposits, which are employed chiefly as a means of seeking to ensure efficient portfolio management) exceeding 1.00% of the total value of purchases and sales for the financial period. At a minimum the largest 20 purchases and sales are listed.

Securities Financing Transactions Regulation (Regulation (EU) 2015/2365) ("SFTR") came into force on 12 January 2016 and, amongst other requirements, introduced new disclosure requirements in the Company's financial statements, detailing each Fund's use of securities financing transactions ("SFTs"), contracts for difference and total return swaps.

Article 13 of Regulation (EU) 2015/2365 on transparency of SFTs and of reuse and amending Regulation (EU) No 648/2012, requires UCITS investment companies to provide the following information on the use made of SFTs.

Below is the fair value of assets engaged in SFTs as at 30 September 2022. The assets which are engaged in SFTs at this date are contracts for difference and total return swaps, which are settled tri-party respectively.

		30 September 2022			
Fund	Currency	Fair Value	% of Net Assets Value		
Lazard Commodities Fund	USD	(1,715,699)	(2.09)		
Lazard Diversified Return Fund	USD	899,637	5.02		
Lazard European Alternative Fund	EUR	8,862,262	1.97		
Lazard Rathmore Alternative Fund	USD	(121,258,105)	(6.44)		

The following table details the counterparties used for each type of contracts for difference and total return swaps as at 30 September 2022.

		30 September 2022				
Fund	Currency	Counterparty Name	Country of Establishment	Fair Value		
Lazard Commodities Fund	USD	CIBC World Markets	Canada	(857,462)		
	USD	UBS AG	Switzerland	(858,237)		
Lazard Diversified Return Fund	USD	Morgan Stanley	United Kingdom and Wales	899,637		
Lazard European Alternative Fund	EUR	Bank of America Merrill Lynch	United Kingdom and Wales	6,852,735		
	EUR	Morgan Stanley	United Kingdom and Wales	2,009,527		
Lazard Rathmore Alternative Fund	USD	<b>BNP</b> Paribas	France	(64,171,171)		
	USD	Nomura	Japan	(45,621,335)		
	USD	Societe Generale	France	(11,465,599)		

The following table provides an analysis of maturity tenor of the contracts for difference and the total return swaps as at 30 September 2022.

Fund	Currency	Less than 1 year	Greater than 1 year	Open Maturity *
Lazard Commodities Fund	USD	-	-	(1,715,699)
Lazard Diversified Return Fund	USD	-	-	899,637
Lazard European Alternative Fund	EUR	-	-	8,862,262
Lazard Rathmore Alternative Fund	USD	-	-	(121,258,105)

The following table provides an analysis of the currency, type and quality of collateral received as at 30 September 2022.

		30 September 2022 Collateral Quality/Rating					
Fund	Currency	Collateral Type	Investment grade	Below investment grade	Not rated		
Lazard European Alternative Fund	EUR	Government Bonds	61,129,156	-	-		
Lazard Rathmore Alternative Fund Lazard Coherence Credit Alternative Fund	USD USD	Government Bonds Government Bonds	162,212,392 5,598,738	-	-		

The following table provides an analysis of the maturity tenor of the collateral received as at 30 September 2022.

Fund	Currency	Less than 1 day	1 day to 1 week	1 week to 1 month	1 to 3 months	3 months to 1 year	Greater than 1 year	Open Maturity
